this book gives insight into the ongoing work of the forum on philosophy engineering and technology fpet which brings together philosophers and engineers from all over the world to discuss philosophical issues of engineering across disciplinary boundaries drawing on presentations and conversations at the fpet 2020 online

conference hosted by the universidad técnica federico santa maría in chile the chapters establish connections and describe discoveries that have so far been neglected in the discussions held within the young discipline of philosophy of engineering this volume appeals to students and researchers in the field through twenty four proposals brought forward by leading scholars and emerging voices pertinent themes covered are the broader engagement of engineers in problem solving beyond the scope of their own profession the exploration of new goals for technology development and the implementation of strategies to reach these goals the need for philosophical content and unique pedagogical approaches to engineering education digital transformations artificial intelligence and the ethics of online collaboration in social media critical revisions of fundamental terminology and theoretical modelling of key concepts in engineering design ethics innovation and the anthropology of technology

the profession of engineering in the united states has historically served the status quo feeding an ever expanding materialistic and militaristic culture remaining relatively unresponsive to public concerns and without significant pressure for change from within this book calls upon engineers to cultivate a passion for social justice and peace and to develop the skill and knowledge set needed to take practical action for change within the profession because many engineers do not receive education and training that support the kinds of critical thinking reflective decision making and effective action necessary to achieve social change engineers concerned with social justice can feel powerless and isolated as they remain complicit utilizing techniques from radical pedagogies of liberation and other movements for social justice this book presents a roadmap for engineers to become empowered and engage one another in a process of learning and action for social justice and peace

whatever their discipline engineers are routinely called upon to develop solutions to all kinds of problems to do so effectively they need a systematic and disciplined approach that considers a range of alternatives taking into account all relevant factors before selecting the best solution in problem solving for engineers david carmichael demonstrates just such an approach involving problem definition generation of alternative solutions and ultimately the analysis and selection of a preferred solution david carmichael introduces the fundamental concepts needed to think systematically and undertake methodical problem solving he argues that the most rational way to develop a framework for problem solving is by using a systems studies viewpoint he then outlines systems methodology modeling and the various configurations for analysis synthesis and investigation building on this the book details a systematic process for problem solving and demonstrates how problem solving and decision making lie within a systems synthesis configuration carefully designed as a self learning resource the book contains exercises throughout that reinforce the material and encourage readers to think and apply the concepts it covers decision making in the presence of uncertainty and multiple criteria including that involving sustainability with its blend of economic social and environmental considerations it also characterizes and tackles the specific problem solving of management planning and design the book provides for the first time a rational framework for problem solving with an engineering orientation

more than 430 practice problems with solutions updated with new codes and standards tested on the exam

in the 1980s philosophical historical and social studies of science underwent a change which later evolved into a turn to practice analysts of science were asked to

pay attention to scientific practices in meticulous detail and along multiple dimensions including the material social and psychological following this turn the interest in scientific practices continued to increase and had an indelible influence in the various fields of science studies no doubt the practice turn changed our conceptions and approaches of science but what did it really teach us what does it mean to study scientific practices what are the general lessons implications and new challenges this volume explores questions about the practice turn using both case studies and theoretical analysis the case studies examine empirical and mathematical sciences including the engineering sciences the volume promotes interactions between acknowledged experts from different often thought of as conflicting orientations it presents contributions in conjunction with critical commentaries that put the theses and assumptions of the former in perspective overall the book offers a unique and diverse range of perspectives on the meanings methods lessons and challenges associated with the practice turn

this book takes a systematic approach to problem definition generation of alternative solutions analysis and selection of the preferred solution the book introduces fundamental terms needed to think systematically and undertake systematic problem solving and covers individual and group problem solving it discusses the selection of the preferred solution involves decision making and fundamental concepts of decision making including decision making in the presence of multiple criteria and uncertainty the treatment embodies decision making for sustainability with its blend of economics social and environmental considerations
