the concept of analogy is of central concern to modern cognitive scientists whereas it has
been largely neglected in linguistics in the past four decades the goal of this thought
provoking book is 1 to introduce a cognitively and linguistically viable notion of analogy and
2 to re establish and build on traditional linguistic analogy based research as a starting point

a general definition of analogy is offered that makes the distinction between analogy as structure and analogy as process chapter 2 deals with analogy as used in traditional linguistics it demonstrates how phonology morphology syntax semantics and diachronic linguistics make use of analogy and discusses linguistic domains in which analogy does or did not work the appendix gives a description of a computer program which performs such instances of analogy based syntactic analysis as have long been claimed impossible chapter 3 supports the ultimate non modular unity of the mind and discusses the existence of pervasive analogies between language and such cognitive domains as vision music and logic the final chapter presents evidence for the view that the cosmology of every culture is based on analogy at a more abstract level the role of analogy in scientific change is scrutinized resulting in a meta analogy between myth and science

assessing the service status and maintaining the safety of existing structures are critical to the sustainable operations of various engineering and cross industry including civil infrastructures railways and machinery static and dynamic structural characteristics play a key role in the global deterioration assessment of the structural performance which has enabled structural monitoring and analysis technology to become an active focus in the engineering area meanwhile structural control has been widely used in modern structural engineering structural control devices are implemented to enhance deteriorating structures and mitigate natural disasters through advanced structural control technology the structural responses can be controlled these structural control techniques include passive active or semi active reverse forces which aim to modify structural stiffness mass and damping with minimal control force structural control monitoring and analysis complement each other ensuring the safety of the structure to the greatest extent
