this text offers an in depth look at the properties thermodynamic formation structure latest trends and scientific application of bio and synthetic polymer gels

the series on charged and reactive polymers was set forth in two volumes concern ing the fundamentals and applications of polyelectrolytes a follow up on charged gels and membranes would therefore seem appropriate necessitating however some explanation for non specialists theories of the most dilute gels originate in that of concentrated polyelectrolytes the methods and problems are similar in structural spectroscopic or thermodynamic properties the borderline can be situated in dialysis conducted with a bag imper meable to polyelectrolytes but not to small ions solutes and water one may recall donnan s use of such a system to experiment and discover his famous law of unequal distribution of ions of different charge inside and out remark ably so it is the difference in scale which characterizes the difference between poly electrolyte solutions and gels and membranes the colloidal solution of macro molecules is heterogeneous only on the microscopic level whereas the gel solution system is a macroscopically heterogeneous one a gel is formed when weak or strong cohesive forces counterbalance the dispersing ones usually by crosslinking without inhibiting the penetration of solvent and of small solutes into the polymeric network the solvophile macromolecules cannot invade the total volume of liquid as a result of phase segregation excess solution and gel coexist and interact the macroscopic swelling depends on gel cross linking as well as on ionic concentration and type and ion selectivities are observed

this volume includes 28 contributions to the toyoichi tanaka memorial symposium on gels which took place at arcadia ichigaya on september 10th 12th 2008 the contributions from leading scientists cover a broad spectrum of topics concerning structure and functional properties of gels

swelling of gels industrial and biomedical application the symposium was held in the style of faraday discussions which stimulated the active discussion after the symposium each manuscript was rewritten based on the discussion and the critical review since the research on gels is becoming more and more important both for academia and industry this book will be an essential source of information

special topic volume with invited papers only
