sedimentology and stratigraphy are neighbors yet distinctly separate entities within the earth sciences sedimentology searches for the common traits of sedimentary rocks regardless of age as it reconstructs environments and processes of deposition and erosion from the sediment record stratigraphy by contrast concentrates on changes with time on measuring time and correlating coeval events sequence stratigraphy straddles the boundary between the two fields this book dedicated to carbonate rocks approaches sequence stratigraphy from its sedimentologic background this book attempts to communicate by combining different specialities and different lines of reasoning and by searching for principles underlying the bewildering diversity of carbonate rocks it provides enough general background in introductory chapters and appendices to be easily digestible for sedimentologists and stratigraphers as well as earth scientists at large
