many changes have been made in this edition first to the nomenclature so that the book  
is in agreement with the international system of units s i and secondly to the circuit  
diagrams so that they conform to b s s 3939 the book has been enlarged and now has  
546 problems much more emphasis has been given to semiconductor devices and  
transistor circuits additional topics and references for further reading have been  
introduced some of the original problems and solutions have been taken out and several  
minor modifications and corrections have been made it could be argued that thermionic  
valve circuits should not have been mentioned since valves are no longer considered  
important by most electronic designers except possibly for very high power or voltage  
applications some of the original problems on valves and valve circuits have been  
retained however for completeness because the material is still present in many  
syllabuses and despite the advent and proliferation of solid state devices in recent years  
the good old fashioned valve looks like being in existence for a long time there are still  
some topics readers may expect to find included which have had to be omitted others  
have had less space devoted to them than one would have liked a new feature of this  
edition is that some problems with answers given at the end of each chapter are left as  
student exercises so the solutions are not included the author wishes to thank his
