considered by many during his lifetime as the most well known scientist in the world stephen jay gould
 left an enormous and influential body of work a harvard professor of paleontology evolutionary biology
 and the history of science gould provided major insights into our understanding of the history of life
 he helped to reinvigorate paleontology launch macroevolution on a new course and provide a context in
 which the biological developmental stages of an organism s embryonic growth could be integrated into
 an understanding of evolution this book is a set of reflections on the many areas of gould s
 intellectual life by the people who knew and understood him best former students and prominent close
 collaborators mostly a critical assessment of his legacy the chapters are not technical contributions
 but rather offer a combination of intellectual bibliography personal memoir and reflection on gould s
 diverse scientific achievements the work includes the most complete bibliography of his writings to
 date and offers a multi dimensional view of gould s life work not to be found in any other volume

a single man stands behind the greatest deception in history charles darwin s ideas still penetrate
 every aspect of our culture including science religion and education and while much has been made of
 his contribution to the evolutionary hypothesis little has been publicized about the dark side of the
 man himself and how this may have impacted the quality and legitimacy of his research this daring and
 compelling book takes its readers behind the popular facade of a man revered worldwide as a scientific
 pioneer and unveils what kind of person darwin really was the book reveals disturbing facts that will
 help you perceive darwin firsthand through the eyes of family and friends and his own correspondence
 discern this darkly troubled man struggling with physical and mental health issues uncover his views
 on eugenics and racism and his belief that women were less evolved than men thoroughly documented this
 book reveals darwin s less than above board methods of attempting to prove his so called scientific
 beliefs and his plot to murder god by challenging the then dominant biblical worldview

in this bold provocative account the author argues that the phenomena of life and mind elude purely materialistic explanations living matter occupies a unique phase of existence which results from the complex transformation of its biochemical synergies analogous phase changes account for mind and self reflexive consciousness a central role in the living state is played by intelligence which has not been recognised as a non negotiable precondition of organic existence yet the concept of evolutionary adaptivity relies tacitly on it thus the book amounts to a serious challenge to the overly theoretical paradigmata of the last half century with their timorous evasion of biological fundamentals however although the work relies on up to date research of the life sciences it is a primarily philosophical enquiry dealing head on with many unsolved problems of life and mind and culminating in a detailed ontological proof of the mind system

vereen bell gives us a subtly reasoned account of the pattern of lowell s poetry is characterized above all by its chronic and systematic pessimism but that paradoxically lowell s reluctance to accept the consequences of his own unsparing vision is what gives his poetry its vigor richness and tonal complexity
