prospects for livestock based livelihoods in africa s drylands examines the challenges and opportunities facing the livestock sector and the people who depend on livestock in the dryland regions of sub saharan africa it presents a novel way of thinking about pastoral development grounded in a conceptual framework that focuses on the multiple shocks that drylands livestock keepers face and how those shocks can be addressed drawing on a state of the art literature review carried out by scientists of leading research institutes and development organizations and integrating the results of an innovative approach to modeling development options for the drylands livestock sector looking to the future the picture is mixed on the positive side demand for red meat is expected to strengthen in domestic and regional markets suggesting that livestock keepers will have good market opportunities on the negative side a large majority of livestock keepers are classified as poor and the natural feed resource base is likely to be sufficient to enable improved meat and milk production for the growing human population prospects for the livestock sector through 2030 vary by aridity zone in arid and semi arid zones a reasonable goal for 2030 is to have land use training and microfinance systems established that promote an appropriate balance between human and livestock carrying capacities featuring mainly grassland pastoral systems that reliably and sustainably satisfy the minimum income needs of herder households produce at least a significant part of the demand in local markets for animal source food and provide environmental services for which livestock keepers receive compensation the goal includes significant employment generation outside the sector in the higher rainfall zones of the semi arid areas and in the subhumid zones a reasonable goal for 2030 is to have intensified production systems established featuring mainly mixed livestock arable farming or agro pastoral systems that are closely linked to nearby grassland pastoral systems and that consistently generate marketable surpluses of differentiated red meat and livestock products that can compete not only in the expanding domestic market but also in selected regional markets

drylands are at the core of africa s development challenge drylands make up about 43 percent of the region s land surface account for about 75 percent of the area used for agriculture and are home to about 50 percent of the population including a disproportionate share of the poor due to complex interactions among many factors vulnerability in drylands is high and rising jeopardizing the long term livelihood prospects for hundreds of millions of people climate change which is expected to increase the frequency and severity of extreme weather events will exacerbate this challenge african governments and their partners in the international development community stand ready to tackle the challenges confronting drylands but important questions remain unanswered about how the task should be undertaken do dryland environments contain enough resources to generate the food jobs and income needed to support sustainable livelihoods for a fast growing population if not can injections of external resources make up the deficit or is the carrying capacity of drylands so limited that outmigration should be encouraged based on analysis of current and projected future drivers of vulnerability and resilience the report uses an original modeling framework to identify promising interventions quantify their likely costs and benefits and describe the policy trade offs that will need to be addressed by 2030 economic growth leading to structural change will allow some of the people living in drylands to transition to non agriculture based livelihood strategies reducing their vulnerability many others will continue to rely on livestock keeping and crop farming for the latter group a number of best bet interventions have the potential to make a significant difference in reducing vulnerability and increasing resilience this report evaluates the opportunities and challenges associated with these interventions and it draws a number of conclusions that have important implications for policy making

an early reviewer of this book stated that he had difficulty assessing its marketability because it falls between the cracks of geological literature we have designed this book to meet a need of modern geology namely a single source providing both detailed and synoptic stratigraphy of the various regions of north america through geological time shortly after beginning work on such a book we realized why it had not yet been written it required six years of effort assimilation of an incredible amount of information and two years additional work to cut the volume down to publishable size further by the time the final chapter was written the first few were already out of date nevertheless the book lies in front of you it is intended to serve several purposes as a textbook it will serve the following courses regional stratigraphy sedimentary tectonics regional tectonics advanced historical geology survey level paleontology obviously not all portions of the book are relevant to all of the above courses we assume the reader will retain this book after the particular course is done and will use it as a reference book hopefully others will obtain the book solely for reference purposes we believe it will be especially useful for the working geologist or academic geologist seeking generalized and some moderately detailed information about a region or geological time interval which is unfamiliar
