bacteriophages or phages are viruses that infect bacteria and are believed to be the most abundant and genetically diverse organisms on earth as such their ecology is vast both in quantitative and qualitative terms their abundance makes an understanding of phage ecology increasingly relevant to bacterial ecosystem ecology bacterial genomics and bacterial pathology abedon provides the first text on phage ecology for almost 20 years written by leading experts synthesizing the three key approaches to studying phage ecology namely studying them in natural environments in situ experimentally in

the lab or theoretically using mathematical or computer models with strong emphasis on microbial population biology and distilling cutting edge research into basic principles this book will complement other currently available volumes it will therefore serve as an essential resource for graduate students and researchers particularly those with an interest in phage ecology and evolutionary biology

publisher description

a concise readable account of the principles underlying embryonic and appendage development in animals and plants illustrated with colorful artwork and interviews with prominent investigators highly recommended for use in undergraduate and graduate courses

one of the most important of the world's ecosystems the tropical rain forest is rapidly being converted to other uses yet it is a poorly known and under utilized natural resource this volume is based on a modern ecological examination of tropical forests and treats both basic and applied aspects structural features are dealt with first including the taxonomic and physical chemical organisation of forests next is a section on the function of forests which considers production nutrient cycling decomposition processes succession trophic dynamics and reproductive biology the behavioral and physiological phenomena underlying forest structure and function are then considered and finally some of the most important applied aspects are examined including the production of timber rates of exploitation and loss of forests conservation traditional human use of forests and disease in tropical forests

the defective image develops the argument that darwinism is predicated on a profound epistemological flaw and proposes to demonstrate that the limitations in darwinism can be illustrated by its inability to furnish a credible explanation for communication the author argues that darwinism is more faith based ideology than scientific theory and that its character as a faith based ideology accounts for much of the rancor that characterizes the current debate over evolution
