problem solving is central to the teaching and learning of chemistry at secondary tertiary and post tertiary levels of education opening to students and professional chemists alike a whole new world for analysing data looking for patterns and making deductions as an important higher order thinking skill problem solving also constitutes a major research field in science education relevant education research is an ongoing process with recent developments occurring not only in the area of quantitative computational problems but also in qualitative problem solving the following situations are considered some general others with a focus on specific areas of chemistry quantitative problems qualitative reasoning metacognition and resource activation deconstructing the problem solving process an overview of the working memory hypothesis reasoning with the electron pushing formalism scaffolding organic synthesis skills spectroscopy for structural characterization in organic chemistry enzyme kinetics problem solving in the academic chemistry laboratory chemistry problem solving in context team based active learning technology for molecular representations ir spectra simulation and computational quantum chemistry tools the book concludes with methodological and epistemological issues in problem solving research and other perspectives in problem solving in chemistry with a foreword by george bodner

the book provides a self study of different topics of organic chemistry via problem solving the present 4th edition has been completely rewritten according to the organic chemistry syllabus of the net csir examination this necessitated the deletion of several topics from the third edition and incorporation of new ones emphasis has been laid on a variety of new reactions name reactions reagents in organic synthesis and incorporation of their knowledge in the entire coverage of organic chemistry in a unique way a thorough study of the book is expected to help the student to excel not only in the university examination including the net examination but also in his learning of various topics and before interview boards several topics like aromaticity pericyclic reactions and heterocyclic chemistry have now been brought up to date and the material provided is complete in itself the presentation has been so designed so as to thread through the entire organic chemistry by the application of the knowledge learnt in one topic to newer situations in other topics the present revised edition also includes numerous important developments since the third edition of the book was published

extensive workbook with more than 200 up to date solved problems on advanced chemical reactors for deeper understanding of chemical reactor

design problem solving in chemical reactor design provides in depth coverage of more than 200 solved complex reactor design problems extracted from core chemical engineering subject areas the problems in this book cover the design of non ideal catalytic multiphase heterogeneous and biochemical reactors rather than focusing on basic chemical reactor engineering concepts each complex problem is solved using simple procedures and mathematical tools enabling readers to better understand the correct procedure for solving problems and solve them faster more conveniently and more accurately this book is inspired by more than two decades of the author s teaching experience in chemical reactor engineering accompanying electronic materials include spreadsheets and easily understandable matlab programs which can both be downloaded from the wiley website some of the topics covered in problem solving in chemical reactor design include optimization operation and complexities of reactor design in the face of non idealities such as mixing issues and residence time distributions utilization of the tanks in series model dispersion model and intricate combinations of ideal reactors to elucidate the impact on conversion rates signal processing within the domain of chemical reactor engineering specifically focusing on convolution and deconvolution methodologies reaction kinetics diffusion dynamics and catalyst efficiency in catalytic reactor design and design of gas catalytic and gas liquid solid catalyst systems in multiphase reactors problem solving in chemical reactor design is an excellent learning resource for students and professionals in the fields of chemical engineering pharmaceuticals biotechnology and fine chemistry

this general organic and biochemistry text has been written for students preparing for careers in health related fields such as nursing dental hygiene nutrition medical technology and occupational therapy it is also suited for students majoring in other fields where it is important to have an understanding of the basics of chemistry students need have no previous background in chemistry but should possess basic math skills the text features numerous helpful problems and learning features

learning the fundamentals of chemistry can be a difficult task to undertake for health professionals for over 35 years this book has helped them master the chemistry skills they need to succeed it provides them with clear and logical explanations of chemical concepts and problem solving they ll learn how to apply concepts with the help of worked out examples in addition chemistry in action features and conceptual questions checks brings together the understanding of chemistry and relates chemistry to things health professionals experience on a regular basis
