this proceedings is a new trend towards pragmatism in the research field examples of this trend are an increase in the number of actual industrial applications support for more widespread use of new sophisticated technologies e g materials design further intertwining of artificial intelligence and control theory methods that reduces the reliance on blind faith still too often associated with ai methods many things have changed since the first airtc event in 1988 two examples illustrate the change in the general attitude of the ifac family in 1990 one of the major closing presentations of the ifac world congress warned the control community about the coming hordes of ai people in 1999 one of the plenary papers at the ifac world congress pointed out that the ai based methods form a natural extension of control theory to the class of non linear systems with incomplete information at least as far as the optimisation is concerned this contrast in attitudes shows how during the past decade many ai people have embraced control theory and many control people have learned the basics of ai this proceedings serves to continue this excellent dialogue by providing many quality papers which link both fields

this set presents papers from the 1999 american control conference topics covered include adaptive control observer based fault detection control applications advances in passivity based control methods stability and time delay systems and advance in control education
