this book consists of the papers presented at the first world conference on constructional steel design held in acapulco mexico december 1992 the conference provided a forum for presentation and discussion by designers and research workers involved with steel construction

a reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams

this text examines the interaction between blast pressure and surface or underground structures whether the blast is from civilian military dust and natural explosions or any other source

the catastrophic earthquakes of the last decades mexico city 1985 loma prieta 1989 northridge 1994 kobe 1995 have seriously undermined there putation of steel structures which in the past represented the most suitable solution for seismic resistant structures even if in very few cases the performance of steel joints and members was unexpectedly bad showing that it was due to some lacks in the current design concept as a consequence of the lessons learned from the above dramatic events many progress has been recently achieved in the conception design and construction by introducing the new deals of the performance based design including the differentiation of earthquaketypes and considering all factor influencing the steel structure behaviour under strong ground motions in this scenario the aim of the book is to transfer the most recent achievements into practical rules for a safe design of seismic resistant steel structures the seven chapters cover the basic principles and design criteria for seismic resistant steel structures which are applied to the main structural typologies like moment resistant frames braced frames and composite structures with particular reference to connections and details
