This is a narrative that has quietly, yet powerfully, captured hearts across the globe, and it's time for you to discover its magic.

From the very first page, you are transported. While the title might hint at dry academic prose, what awaits is an imaginative setting that breathes life into abstract concepts. Imagine a vibrant tapestry woven with the threads of data, each element imbued with a story waiting to be told. The author masterfully crafts an environment where statistical principles don't just exist; they thrive, pulsating with the rhythm of real-world applications. no other work treating indian philosophy on a comparable scale contains the illuminating comparisons between doctrines of indian schools and the thought of western philosophy ranging from plato to sartre and wittgenstein it will moreover contribute to the understanding of western philosophy by indian thinkers and vice versa raju has an intimate acquaintance with a remarkable range of western thinkers and this distinguishes his work from most of what has gone before raju moreover is himself a critical thinker and consequently although he has written a history he treats the ideas and doctrines in a philosophical mode and his assessments of positions are often original and illuminating john e smith clark professor of philosophy yale university purpose to deal with indian philosophy in a fashion reflecting the way the best german historians of philosophy deal with western philosophy the book is remarkable for its comprehensiveness in combination with extensive

critical discussions raju's book is more critical than radhakrishnan's and more philosophical than dasgupta's. radhakrishnan's comments are far less philosophically sophisticated and interesting than raju's. a monument to a senior indian philosopher's lifelong study and thoughtful critical consideration of the great classical systems of his tradition. karl h. potter, professor of philosophy, university of washington. raju's credentials are impeccable. he is one of the few scholars in the world who could presume to write a major work on indian thought. accordingly, his knowledge of the indian schools is accurate and impressive to the extent that one of his intentions is to cast those schools in terms which make them more intelligible to western readers. his work measures up very well. harold h. oliver, professor of philosophy, boston university.

first published in 1961. inductive probability is a dialectical analysis of probability as it occurs in inductions. the book elucidates on the various forms of inductive, the criteria for their validity and the consequent probabilities. this survey is complemented with a critical evaluation of various arguments concerning induction and a consideration of relation between inductive reasoning and logic. the book promises accessibility to even casual readers of philosophy but it will hold particular interest for students of philosophy, mathematics and logic.

one of the most important divisions in the human mind is between perception and reasoning. we reason from information that we take ourselves to have already but perception is a means of taking in new information. reasoning can be better or worse but perception is considered beyond reproach. the rationality of perception argues that these two aspects of the mind become deeply intertwined when beliefs, fears, desires or prejudice influence what we perceive. when the influences reach all the way to perceptual appearances we face a philosophical problem. is it reasonable to strengthen what one believes or fears or suspects on the basis of an experience that was generated by those very same beliefs, fears or suspicions. drawing on examples involving racism, emotion and scientific theories, siegel argues that perception itself can be rational or irrational and makes vivid the relationship between perception and culture.

when asked in 1962 on what he was working, kazimierz ajdukiewicz replied: several years ago polish scientific publishers suggested that i prepare a new edition of the logical foundations of teaching which i wrote before 1939 as a contribution to the encyclopaedia of education. it was a small booklet covering elementary information about logical semantics and scientific methodology, information which in my opinion was necessary as a foundation of teaching and as an element of the education of any teacher. when i recently set to preparing the new edition i rewrote practically everything and a booklet of some 100 pages swelled into a bulky volume almost five times bigger. the issues have remained practically the same but they are now

analysed much more thoroughly and the threshold of difficulty is much higher now the main stress has been laid on the methods used in the empirical sciences and within that field on the theory of measurement and the methods of statistical inference i am now working on the last chapter of the book concerned with explanation procedures and theory construction in the empirical sciences when that book which i intend to entitle pragmatic logic is completed i intend to prepare for the press vol 2 of my minor writings 2 language and cognition which will cover some of my post war papers
