this book follows a precursor volume devoted to biological calcification sued by the crc press boca raton florida in 1992 several basic aspects of the calcification process were analyzed in it by outstanding authors who had unquestioned competence in their respective research areas its main aim was that of giving readers access to a series of papers which even though they discussed divergent aspects of biological calcifications drawn from the study of systems as different as vertebrate skeletons and mollusks in vitro cultures and unicellular organisms ectopic calcification and urinary stones

provided elements permitting a coherent approach to a comprehensive view of the calcification process in biological tissues now almost 15 years after the publication of that book a great variety of new data from a wide spectrum of biological organisms and systems has enriched our knowledge of the normal and pathological mechanisms which can lead to calcification even so this whole process is still problematic the new knowledge concepts and ideas have often suggested that a definitive solution was close at hand but the local mechanism through which the inorganic substance is laid down in organic matrices continues to be an elusive largely enigmatic topic

the encyclopedia of cell biology four volume set offers a broad overview of cell biology offering reputable foundational content for researchers and students across the biological and medical sciences this important work includes 285 articles from domain experts covering every aspect of cell biology with fully annotated figures abundant illustrations videos and references for further reading each entry is built with a layered approach to the content providing basic information for those new to the area and more detailed material for the more experienced researcher with authored contributions by experts in the field the encyclopedia of cell biology provides a fully cross referenced one stop resource for students researchers and teaching faculty across the biological and medical sciences fully annotated color images and videos for full comprehension of concepts with layered content for readers from different levels of experience includes information on cytokinesis cell biology cell mechanics cytoskeleton dynamics stem cells prokaryotic cell biology rna biology aging cell growth cell injury and more in depth linking to academic press elsevier content and additional links to outside websites and resources for further reading a one stop resource for students researchers and teaching faculty across the biological and medical sciences
