this and its companion volumes 2 and 3 document the proceedings of the 4th international symposium on surfactants in solution held in lund sweden june 27 july 2 1982 this biennial event was christened as the 4th symposium as this was a continuation of earlier conferences dealing with surfactants held in 1976 albany under the title micellization solubilization and microemulsions in 1978 knoxville under the title solution chemistry of surfactants and in 1980 potsdam where it was dubbed as solution behavior of surfactants theoretical and applied aspects the proceedings of all these symposia have been properly chronicled the lund symposium was believed as surfactants in solution as both the aggregation and adsorption aspects of surfactants were covered and furthermore we were interested in a general title which could be used for future conferences in this series as these biennial events have become a well recognized forum for bringing together researchers with varied interests in the arena of surfactants so it is amply vindicated to continue these and the next meeting is planned for july 9 13 1984 in bordeaux france under the cochairmanship of k l mittal and p bothorel the venue for 1986 is still open although india inter alia is a good possibility apropos we would be delighted to entertain suggestions regarding where and when these biennial symposia should be held in the future and you may direct your response to kk

this series emerged through the vision of the late antonio cassese since then the series has published original and innovative works on challenging issues in international humanitarian law and international criminal justice primarily by emerging authors given the ever growing intersection of these areas with other fields of international law such as the jus ad bellum and disciplines such as criminology sociology and history the scope of the series also incorporates these perspectives fresh approaches and new ideas for improving conceptual and practical challenges are welcomed the series editors encourage submissions from around the world and will consider edited collections although the primary focus is on authored works book jacket

recombinant proteins and polypeptides continue to be the most important class of biotechnology derived agents in today's pharmaceutical industry over the past few years our fundamental understanding of how proteins degrade and how stabilizing agents work has made it possible to approach formulation of protein pharmaceuticals from a much more rational point of view this book describes the current level of understanding of protein instability and the strategies for stabilizing proteins under a variety of stressful conditions

water is perhaps the most important chemical substance known without it the very existence of life would be questionable yet its detailed structure and behaviour in the condensed phase and the interfaces between the condensed phase and its environment remain somewhat controversial indeed as ever more sophisticated and novel experimental and theoretical tools are applied to the study of bulk liquid water and ice and its interfaces it is becoming increasingly clear that this disparate information could heat the debate on the phase and interface behaviour of water rather than cool it this book plans to achieve a unification of views towards the goal of understanding the microscopic structure and behaviour of condensed phases of water at interfaces and progressing into the bulk

monoclonal antibodies mabs are currently the major class of protein bio therapeutic being developed by biotechnology and pharmaceutical companies monoclonal antibodies discusses the challenges and issues revolving around development of a monoclonal antibody produced by recombinant dna technology into a therapeutic agent this book covers downstream processing which includes design of processes to manufacture the formulation formulation design fill and finish into closure systems and routes of administration the characterization of the final drug product is covered where the use of biophysical methods combined with genetic engineering is used to understand the solution properties of the formulation the latter has become very important since many indications such as arthritis and asthma require the development of formulations for subcutaneous delivery sc the development of formulations for iv delivery is also important and comes with a different set of challenges the challenges and strategies that can

overcome these limitations are discussed in this book starting with an introduction to these issues followed by chapters detailing strategies to deal with them subsequent chapters explore the processing and storage of mabs development of delivery device technologies and conclude with a chapter on the future of mabs in therapeutic remedies discusses the challenges to develop mabs for intravenous iv and subcutaneous delivery sc presents strategies to meet the challenges in development of mabs for sc and iv administration discusses the use of biophysical analytical tools coupled with mab engineering to understand what governs mab properties at high concentration
