calls for transforming higher education toward sustainability by academics are not new. Recently students both current and prospective have actively voiced their demands for this change. They seek an education that equips them to navigate the complexities of sustainability and climate change, fostering knowledge and skills for action in response. Higher education institutions are formulating strategies to align their mission with sustainability goals. However, the effectiveness of these strategies along with the underlying policies and practices remains insufficiently studied to address this gap. It is crucial to convene academics, professional staff and students for discussions on necessary cultural shifts, a roadmap and ways to monitor and evaluate this change. Such dialogues will lead to improved decision making for transformation to achieve sustainability. Students will not only learn about sustainability in their courses but also apply them to their lives within and beyond universities that champion holistic sustainability transformation.

The underlying philosophy of the conference continues to be the promotion of fundamental understanding of the structure and role of composite interfaces. With the growth of composite interface studies, the research direction naturally changes from characterization and understanding of interfacial structure to controlling this structure. For this reason, the conference was subtitled *Controlled Interphase Structure*. The rather unfamiliar phrase *interphase* is used to emphasize the interfacial region whose properties are different from the bulk. The importance of the interphase to the mechanochemical properties has been rapidly recognized among composite researchers in recent years. The conference incorporated nine sessions. No concurrent sessions were planned because of the strong interest among participants and organizers. To intensify researchers from different disciplines, papers presented were redistributed
