water that results in san sebastian residents devoting a high proportion of their income in obtaining water lost opportunities due to the cessation of mining uncertain land tenure situation and increasing growth of asgm activities that exacerbate already existing environmental pollution due to use of mercury the study also found that the state s capacity to ensure compliance with the law is very weak and that in many important respects the country s current legal framework does not meet world s best practice when it comes to mine closure requirements the findings are important because they demonstrate that the lack of closure planning can lead to private operators socializing the costs of pollution the study also shows that the lack of state capacity may result in extractive projects becoming socio economic liabilities in the long term
