throughout his career michael reisman emphasized law s function in shaping the future in this wide ranging collection of essays major thinkers in the international legal field address the goals of the twenty first century and how international law can address the needs of the world community the result is a volume of outstanding scholarship that will appeal to all those lawyers political scientists and educated laymen interested in international law legal theory human rights international investment law and commercial arbitration boundary issues law of the sea and law of armed conflict

the question of the sources of international law inevitably raises some well known scholarly controversies where do the rules of international law come from and more precisely through which processes are they made how are they ascertained and where does the international legal order begin and end this is the static question of the pedigree of international legal rules and the boundaries of the international legal order second what are the processes through which these rules are made this is the dynamic question of the making of these rules and of the exercise of public authority in international law the oxford handbook of the sources of international law is the very first comprehensive work of its kind devoted to the question of the sources of international law it provides an accessible and systematic overview of the key issues and debates around the sources of international law it also offers an authoritative theoretical guide for anyone studying or working within but also outside international law wishing to understand one of its most foundational questions this handbook features original essays by leading international law scholars and theorists from a range of traditions nationalities and perspectives reflecting the richness and diversity of scholarship in this area

this wide ranging series provides expert insights into the most fundamental aspects of public international law and has for many years made a major contribution to the international debate on legal issues affecting the world community

this title was first published in 2002 the purpose if this volume is to provide a map of some of the great theoretical debates within the discipline of international law the essays included are structured as dialogues between international legal theorists on concrete subjects such as democracy gender compliance sovereignty and justice they represent the most interesting theoretical work undertaken in international law

this is one of the few books dealing with regime theory to be written from a legal point of view Jurgielewicz's book is part of an effort to promote interdisciplinary research on the nature of the international legal order. Her work explores the concept of international regimes within the international legal order utilizing the policy-oriented approach to international law. The study uses examples of global environmental change as models by examining the general international law applicable to climate change and ozone layer depletion. The author attempts to explain the original need for regime formation in these areas. Next, Jurgielewicz looks at the role of regimes within international law focusing on their formation, maintenance, source of legal obligation, and compliance mechanisms. The book concludes that regimes are present within the international legal order and play a vital role in maintaining that order. This book will appeal to students in law schools, graduate schools, or advanced undergraduate seminars covering international relations, international legal theory, international law, and international organizations.

Since the mid 1980s, there have been substantial cuts in military spending everywhere except Pacific Asia. The reasons are both political, such as the end of the Cold War, democratization in Africa and Latin America, and economic, with structural adjustment programmes, debt, and cuts in public spending. This is the first volume of a study by the United Nations University to investigate the changes taking place world-wide in armed forces, arms industries, and all other military-related activity. The main conclusion of the study is that a fundamental transformation is taking place in the nature of warfare. It argues that recent wars arose from the disintegration of state structures; participation in wars is low compared with earlier wars, as are casualties. However, the new wars are very disruptive in social terms. The book argues that it is possible to identify a certain logic to the new wars, which can be analyzed so as to provide a basis for alternative forms of conflict prevention and resolution.

Creating a peaceful and sustainable global future is as much an ethical and spiritual matter as an economic, social, and legal one. To respond to the challenges resulting from today's global economic and ecological interdependence, twenty-one distinguished scholars from the world's major religions describe their traditions, contributions to the development of a shared global ethic, respectful of national, cultural, and religious diversity, and its applications in humane and effective global governance structures and systems. They show how each tradition frames comprehensive values for human society, contains seeds of world systems thinking, and approaches multireligious initiatives. These contributors are seekers, doers, and path pointers on the human journey toward a global civilization in which people of diverse cultures and belief systems will need to learn to live in true community.
