following in the footsteps of previous highly successful and useful editions biological wastewater treatment third edition presents the theoretical principles and design procedures for biochemical operations used in wastewater treatment processes it reflects important changes and advancements in the field such as a revised treatment of the microbiology and kinetics of nutrient removal and an update of the simulation of biological phosphorous removal with a more contemporary model see what s new in the third edition a chapter devoted to the description and simulation of anaerobic bioreactors coverage of applications of submerged attached growth bioreactors expanded discussion of modeling attached growth systems increased information on the fate and effects of trace contaminants as they relate to xenobiotic organic chemicals a chapter on applying biochemical unit operations to design systems for greater sustainability the book describes named biochemical operations in terms of treatment objectives biochemical environment and reactor configuration introduces the format and notation used throughout the text and presents the basic stoichiometry and kinetics of microbial reactions that are key to quantitative descriptions of biochemical operations it then examines the stoichiometry and kinetics used to investigate the theoretical performance of biological reactors containing microorganisms suspended in the wastewater the authors apply this theory to the operations introduced taking care to highlight the practical constraints that ensure system functionality in the real world the authors focus on further biochemical operations in which microorganisms grow attached to solid surfaces adding complexity to the analysis even though the operations are often simpler in application they conclude with a look to the future introducing the fate and effects of xenobiotic and trace contaminants in wastewater treatment systems and examining how the application of biochemical operations can lead to a more sustainable world

prepared by a joint task force of the american society of civil engineers and the water pollution control federation asce manuals and reports on engineering practice no 68 the manual summarizes current aeration practices in wastewater treatment and includes both theoretical and practical guidelines for the design and operation of such unit processes charts and illustrations are used throughout to reinforce the text

carefully designed to balance coverage of theoretical and practical principles fundamentals of water treatment unit processes delineates the principles that support practice using the unit processes approach as the organizing concept the author covers principles common to any kind of water treatment for example drinking water municipal wastewater

includes entries for maps and atlases

this guide has been produced by the water pollution control federation to encourage and aid the establishment of safety programs in wastewater and pollution control works it was developed as a special project of the wpcf safety committee
