some recent fuzzy database modeling advances for the non traditional applications are introduced in this book the focus is on database models for modeling complex information and uncertainty at the conceptual logical physical design levels and from integrity constraints defined on the fuzzy relations the database models addressed here are the conceptual data models including the exifo and exifo2 data database models including the extended nf2 database model fuzzy object oriented database model and the fuzzy deduc database model integrity constraints are defined on the fuzzy relations are also addressed a continuing reason for the limited adoption of fuzzy database systems has been performance there have been few efforts at defining physical structures that accomodate fuzzy information a new access structure and data organization for fuzzy information is introduced in this book

universal methods of ethical design is a collection of 100 ethics focused design methods to help design practitioners and students make a positive social impact

this book addresses the challenging topic of modeling adaptive networks which often manifest inherently complex behavior networks by

themselves can usually be modeled using a neat declarative and conceptually transparent network oriented modeling approach in contrast adaptive networks are networks that change their structure for example connections in mental networks usually change due to learning while connections in social networks change due to various social dynamics for adaptive networks separate procedural specifications are often added for the adaptation process accordingly modelers have to deal with a less transparent hybrid specification part of which is often more at a programming level than at a modeling level this book presents an overall network oriented modeling approach that makes designing adaptive network models much easier because the adaptation process too is modeled in a neat declarative and conceptually transparent network oriented modeling manner like the network itself thanks to this approach no procedural algorithmic or programming skills are needed to design complex adaptive network models a dedicated software environment is available to run these adaptive network models from their high level specifications moreover because adaptive networks are described in a network format as well the approach can simply be applied iteratively so that higher order adaptive networks in which network adaptation itself is adaptive second order adaptation too can be modeled just as easily for example this can be applied to model metaplasticity in cognitive neuroscience or second order adaptation in biological and social contexts the book illustrates the usefulness of this approach via numerous examples of complex higher order adaptive network models for a wide variety of biological mental and social processes the book is suitable for multidisciplinary master s and ph d students without assuming much prior knowledge although also some elementary mathematical analysis is involved given the detailed information provided it can be used as an introduction to network oriented modeling for adaptive networks the material is ideally suited for teaching undergraduate and graduate students with multidisciplinary backgrounds or interests lecturers will find additional material such as slides assignments and software

electromagnetic nondestructive evaluation ende is an invaluable tool for assessing the condition of a test object without permanently altering or harming it in any way it has become an indispensable technique for troubleshooting and research in diverse fields such as engineering medicine and art this book presents one plenary lecture and 41 selected papers from the 19th international workshop on electromagnetic nondestructive evaluation held in xi an china in june 2014 the workshop focused on research into the theory and application of ende methods and provided a forum for the exchange of ideas and discussion of recent developments the papers are arranged in five sections material characterization

nietzsche and darwin were rough contemporaries who shared an interest in the origins of moral behavior but whose views on the subject could not have been further apart where darwin saw selection in favor of the strong and the fit nietzsche saw the triumph of the will to power most of what nietzsche said about darwin was quite hostile however richardson argues that nietzsche was far more deeply influenced by darwin than he ever acknowledged furthermore he proposes that once the darwinian aspect of nietzsche s thinking is brought to the surface many of his philosophical positions turn out to be better grounded than we might have thought otherwise the heart of the book is richardson showing how particularly problematic nietzschean issues the will to power the subjective nature of moral and ethical values and the relationship between morality and aesthetics benefit from a new view of nietzsche s unspoken embrace of darwinian ideas and the natural sciences more generally the result is an important contribution to our understanding of this controversial thinker
