provides insight into recycling legislation and its relationship with trade law explaining numerous environmental policy tools such as producer responsibility examines the relationship between international trade and environmental protection uses a case study of electronic recycling and a comparative law approach to clarify the evolving law of the european community and the united states

over the last decade market based incentives have become the regulatory tool of choice when trying to solve difficult environmental problems evidence of their dominance can be seen in recent proposals for addressing global warming through an emissions trading scheme in the kyoto protocol and for amending the clean air act to add a new emissions trading systems for smog precursors and mercury the bush administration s clear skies program they are widely viewed as more efficient than traditional command and control regulation this collection of essays takes a critical look at this question and evaluates whether the promises of market based regulation have been fulfilled contributors put forth the ideas that few regulatory instruments are actually purely market based or purely prescriptive and that both approaches can be systematically undermined by insufficiently careful design and by failures of monitoring and enforcement all in all the essays recommend future research that no longer pits one kind of approach against the other but instead examines their interaction and compatibility this book should appeal to academics in environmental economics and law along with policymakers in government agencies and advocates in non governmental organizations
