in technology and anarchy a reading of our era simona chiodo argues that our technological era can be read as the most radical form of anarchism ever experienced people are not only removing the role of the expert as a mediator but also trying for the first time in history to replace the role of a transcendent god itself by creating especially through information technology a totally immanent technological entity characterized by the typical ontological prerogatives of the divine omnipresence by being everywhere omniscience by knowing everything especially about us omnipotence by having power especially over us and inscrutability chiodo proposes a novel view of our technological era by reading it as the last step of a precise trajectory of western thought i e as the most radical form of anarchism we have ever experienced due to the crisis of the founding epistemological relationship between ideality and reality by doing this chiodo helps fill the gap between technological innovation and the humanities which is becoming an emerging research goal that is more and more urgent in order to face the greatest challenges of our present and future

neurobiology and emphasize the interplay of time experience and cortical architecture to explain emergent knowledge with an empirical line of research identifying a set of general purpose sensory perceptual and learning mechanisms that guide knowledge acquisition across different domains and through development
