the structure of the micro economic theory and its motivation

this book deals with microeconomic theory as it concerns general economic equilibrium and the implications for prices and resource allocation students with a background in mathematics will find in this volume a broad comprehensible overview of the ideas which have contributed to our understanding of general equilibrium

ariel rubinstein s well known lecture notes on microeconomics now fully revised and expanded this book presents ariel rubinstein s lecture notes for the first part of his well known graduate course in microeconomics developed during the fifteen years that rubinstein taught the course at tel aviv university princeton university and new york university these notes provide a critical assessment of models of rational economic agents and are an invaluable supplement to any primary textbook in microeconomic theory in this fully revised and expanded second edition rubinstein retains the striking originality and deep simplicity that characterize his famously engaging style of teaching he presents these lecture notes with a precision that gets to the core of the material and he places special emphasis on the interpretation of key concepts rubinstein brings this concise book thoroughly up to date covering topics like modern choice theory and including dozens of original new problems written by one of the world s most respected and provocative economic theorists this second edition of lecture notes in microeconomic theory is essential reading for students teachers and research economists fully revised expanded and updated retains the engaging style and method of rubinstein s well known lectures covers topics like modern choice theory features numerous original new problems including 21 new review problems solutions manual available only to teachers can be found at gametheory tau ac il microtheory

economic concepts and techniques presented through a series of big questions models that show

how to pose a questions rigorously and work toward an answer this book helps readers master economic concepts and techniques by tackling fundamental economic and political questions through a series of models it is organized around a sequence of big questions among them when do markets help translate individuals uncoordinated selfish actions into outcomes that are best for all do markets change people and if so for worse or better translated into the language of modern economics do marx s ideas have merit why is there so much income inequality or is there too little the arguments are in the theorem proof format distinguishing results derived in the context of fully specified models from educated speculation readers will learn how to pose a question rigorously and how to work toward an answer and to appreciate that even especially the broadest and most ambitious questions call for a model the goal of the book is not to indoctrinate but to show readers how to reason toward their own conclusions the first chapter on the walrasian model of general equilibrium serves as the prerequisite for the rest of the book the remaining chapters cover less conventional topics including the morality of markets matching theory marxism socialism and the resilience of markets a formalization of kant s categorical imperative unintended consequences of policy design and theories of justice the book can be used as a textbook for advanced undergraduate or graduate students or as a resource for researchers in disciplines that draw on normative economics

people pursue their own interests whatever those interests might be some people have interests that are narrow and selfish while others have interests that are broad and altruistic the idea that people are self interested underpins all of economic analysis and raises two fundamental questions 1 how do people choose the actions they think will further their own interests 2 can the potentially conflicting interests of different people be made to mesh in some sort of socio economic equilibrium this book is devoted to a detailed study of the first question its companion volume economy wide microeconomics equilibrium optimality applications and tests makes a detailed study of the second question following some foundational remarks this book studies the arrow debreu theory of consumer choice that theory supposes people choose so as to maximize a complete continuous transitive and reflexive binary preference relation over a non empty and compact choice set the book then studies numerous refinements generalizations and extensions of each of these restrictions up to and including recent work on behavioral theories of choice and choice behaviour when preferences are intransitive incomplete discontinuous also considered is choice behaviour in environments that are not necessarily compact a study is also made of intertemporal choice and choice under uncertainty the study of arrow debreu choice theory and its extensions are presented from the primal dual and revealed preference points of view consumers are not the only agents in the economy as producers are present as well beginning with a study of the arrow debreu idea that producers choose from a convex production set so as to maximize profit the book considers extensions and generalizations of this framework particularly to non convex environments the study is presented from the primal and dual points of view the final chapter in the book provides a link to its companion volume the chapter indicates how the theories of consumer and producer choice studied here help inform answers of the second question posed above resources are available to instructors who adopt this book more details at worldscientific com worldscibooks 10 1142 12789 sm

lecture notes in microeconomic theory is the first publication of ariel rubinstein s lecture notes from the first part of his well known course in microeconomic theory which he has taught for fifteen years to first year graduate students at tel aviv princeton and new york universities the book will be an invaluable supplement to primary textbooks in microeconomic theory conveying the style and method of rubinstein s lectures it will benefit teachers and research economists as well as students the book focuses on and provides a critical assessment of models of rational economic agents and it contains a large number of original problems rubinstein one of the world s most respected economics theorists has made substantial contributions to several fields in economics particularly game theory his work is characterized by an unusual combination of deep originality and surprising simplicity he is probably best known for his contributions to the bargaining problem and more recently to bounded rationality

examines both neoclassical and behavioural institutionalist approaches to microeconomic real world problems

these notes are based on the microeconomics lectures delivered in the master of science in applied economics msae programme at the city university of hong kong they have been delivered in the fall semesters of 2005 2007 the lectures are delivered over a period of thirteen weeks three hours per week one should always remember the time constraint involved in delivering lectures everything can not be covered therefore one has to be selective in what is taught this is the reason for calling these lectures core microeconomics the topics selected and taught reflect our perceptions and value judgement about core topics in microeconomics also the students in this class at the city university of hong kong come from a very heterogeneous background which varies a lot medicine law mathematics engineering physics biology and of course economics the course is designed to teach all these heterogeneous students important topics in microeconomics in a span of thirteen weeks this is a tough task and many of these students are very ambitious and desirous of doing graduate studies in europe canada and the us the feedback on this course has been extremely good from students who are pursuing graduate studies in britain and the us these are lecture notes that vary in level at which different topics are taught and also the depth at which these topics are covered they should not be taken as a substitute for a textbook but as an aid for reading other textbooks

this book offers a comprehensive overview of current innovative approaches to assessing domain specific and generic student learning and learning outcomes in higher education the presented work from all projects of the kokohs program the most significant research initiative in german higher education since 2011 describes established tools and empirical results

the first part of this book contains the material for a course in standard microeconomics and general equilibrium these chapters contain the necessary background on commodities consumers producers as well as the classical results about the existence of general walras equilibria and the fundamentals of welfare theory the second part of the book may be seen as a continuation dealing with more advanced topics this textbook shows how the general equilibrium theory can be put into use to provide new insights into various fields of economic science the reader does not need previous particular mathematical training the formal approach is introduced in a piecemeal fashion so that no difficult mathematics occurs in the beginning

this book presents for the first time a detailed transcription of jacob viner s economics 301 class as taught in 1930 these lecture notes provide insight into the legacy of jacob viner whose seminal contributions to fields such as international economics and the history of economics are well known but whose impact in sparking the revival of marshallian microeconomics in the united states via his classroom teaching has been less appreciated generations of graduate students at the university of chicago have taken economics 301 the course has been taught by such luminaries as milton friedman and gary becker and remains an introduction to the analytical tools of microeconomics and the distinctive chicago way of thinking about the market system this demanding and rigorous course first became famous in the 1930s when it was taught by jacob viner when read in tandem with the transaction editions of milton friedman s price theory frank knight s the economic organization and gary becker s economic theory viner s lectures provide the reader with important insights into the formative period of chicago price theory these recently discovered notes from viner s class will be important for historians of economic thought and anyone interested in the origins of the chicago school of economics

a sophisticated yet non technical introduction to microeconomics for mba students now in its third edition
