for language production written spoken and signed questions regarding how the brain comprehends meaning including emotions at word and discourse levels are addressed in section iv finally section v reaches into broader territory characterizing and contextualizing the neurobiology of language with respect to more fundamental neuroanatomical mechanisms and general cognitive domains

this handbook includes an overview of those areas of cognition and language processing that are relevant to the field of communication disorders and provides examples of theoretical approaches to problems and issues in communication disorders the first section includes a collection of chapters that outline some of the basic considerations and areas of cognition and language that underlie communication processing a second section explains and exemplifies some of the influential theories of psycholinguistic cognitive processing and the third section illustrates theoretical applications to clinical populations there is coverage of theories that have been either seminal or controversial in the research of communication disorders given the increasing multi cultural workload of many practitioners working with clinical populations chapters relating to bilingual populations are also included the volume book provides a single interdisciplinary source where researchers and students can access information on psycholinguistic and cognitive processing theories relevant to clinical populations a range of theories models and perspectives are provided the range of topics and issues illustrate the relevance of a dynamic interaction between theoretical and applied work and retains the complexity of psycholinguistic and cognitive theory for readers both researchers and graduate students whose primary interest is the field of communication disorders
