one of the most puzzling lapses in accounts of the rise of the west following the decline of the roman empire is the casual way historians have dealt with gutenbergs invention of printing the cultural achievements that followed the fifteenth century when the west moved from relative backwardness to remarkable robust cultural achievement would have been impossible without gutenbergs gift and its subsequent widespread adoption across most of the world richard abel follows the radical cultural impact of the printing revolution from the eighth century to the renaissance addressing the viability of the new christian classical culture although this culture proved too fragile to endure those who salvaged it managed to preserve elements of the classical substance together with the bible and all the writings of the church fathers the cultural upsurge of the renaissance fourteenth to seventeenth centuries which resulted in part from gutenbergs invention is a major focus of this book abel aims to delineate how the cultural revolution was shaped by the invention of printing he evaluates its impact on the rapid reorientation and acceleration of the cultural evolution in the west this book provides insight into the history of the printed word the roots of modern day mass book production and the promise of the electronic revolution it is an essential work in the history of ideas

as an interdisciplinary field computational linguistics has its sources in several areas of science each with its own goals methods and historical background thereby it has remained unclear which components fit together and which do not this suggests three possible approaches to designing a computational linguistics textbook the first approach proceeds from ones own school of thought usually determined of study rather than by a well informed delib by chance such as ones initial place erate choice the goal is to extend the inherited theoretical framework or method to as many aspects of language analysis as possible as a consequence the issue of compatibility with other approaches in the field need not be addressed and ones assumptions are questioned at best in connection with puzzling problems the second approach takes the viewpoint of an objective observer and aims to survey the field as completely as possible however the large number of different schools methods and tasks necessitates a subjective selection furthermore the presumed neutrality provides no incentive to investigate the compatibility between the elements selected the third approach aims at solving a comprehensive functional task with the differ to arrive at the desired solution suitability ent approaches being ordered relative to it and compatibility of the different elements adopted must be investigated with regard to the task at hand
