this book constitutes the refereed proceedings of the 19th eunice ifip wg 6 2 6 6 workshop on advances in communication networking eunice 2013 held in chemnitz germany in august 2013 the 23 oral papers demonstrated together with 9 poster presentations were carefully reviewed and selected from 40 submissions the papers are organized in topical sections on network modeling and design traffic analysis network and traffic management services over mobile networks monitoring and measurement security concepts application of ict in smart grid and smart home

environments data dissemination in ad hoc and sensor networks and services and applications

dear delegates friends and members of the growing KES professional community welcome to the proceedings of the 9th international conference on knowledge based and intelligent information and engineering systems hosted by La Trobe University in Melbourne Australia the KES conference series has been established for almost a decade and it continues each year to attract participants from all geographical areas of the world including Europe the Americas Australasia and the Pacific Rim the KES conferences cover a wide range of intelligent systems topics the broad focus of the conference series is the theory and applications of intelligent systems from a pure research field intelligent systems have advanced to the point where their abilities have been incorporated into many business and engineering application areas KES 2005 provided a valuable mechanism for delegates to obtain an extensive view of the latest research into a range of intelligent systems algorithms tools and techniques the conference also gave delegates the chance to come into contact with those applying intelligent systems in diverse commercial areas the combination of theory and practice represented a unique opportunity to gain an appreciation of the full spectrum of leading edge intelligent systems activity the papers for KES 2005 were either submitted to invited sessions chaired and organized by respected experts in their fields or to a general session managed by an extensive international program committee or to the intelligent information hiding and multimedia signal processing IIHMSP workshop managed by an international workshop technical committee

many of today's complex scientific applications now require a vast amount of computational power general purpose graphics processing units (GPUs) enable researchers in a variety of fields to benefit from the computational power of all the cores available inside graphics cards understand the benefits of using GPUs for many scientific applications

this book comprises select proceedings of the international conference on future learning aspects of mechanical engineering FLAME 2018 the book discusses different topics of industrial and production engineering such as sustainable manufacturing systems computer aided engineering rapid prototyping manufacturing management and automation metrology manufacturing process optimization casting welding machining and machine tools the contents of this book will be useful for researchers as well as professionals

for more than 50 years the transportation research record has been internationally recognized as one of the preeminent peer reviewed journals for transportation research papers from authors in the United States and from around the world one of the most cited transportation journals the TRR offers unparalleled depth and breadth in the coverage of transportation topics from both academic and practitioner perspectives all modes of passenger and freight transportation are addressed in papers covering a wide array of disciplines including policy planning administration economics and financing operations construction design maintenance safety and more publisher's website

contemporary design in engineering and industry relies heavily on computer simulation and efficient algorithms to reduce the cost and to maximize the performance and sustainability as well as profits and energy efficiency solving an

optimization problem correctly and efficiently requires not only the right choice of optimization algorithms and simulation methods but also the proper implementation and insight into the problem of interest this book consists of ten self contained detailed case studies of real world optimization problems selected from a wide range of applications and contributed from worldwide experts who are working in these exciting areas optimization topics and applications include gas and water supply networks oil field production optimization microwave engineering aerodynamic shape design environmental emergence modelling structural engineering waveform design for radar and communication systems parameter estimation in laser experiment and measurement engineering materials and network scheduling these case studies have been solved using a wide range of optimization techniques including particle swarm optimization genetic algorithms artificial bee colony harmony search adaptive error control derivative free pattern search surrogate based optimization variable fidelity modelling as well as various other methods and approaches this book is a practical guide to help graduates and researchers to carry out optimization for real world applications more advanced readers will also find it a helpful reference and aide memoire
