These chapters set the tone by emphasizing the importance of aligning financial decisions with shareholder wealth maximization.

Time Value of Money

A cornerstone of financial management, the time value of money (TVM) is intricately explained with formulas, practical examples, and visual aids. The authors delve into present and future value calculations, annuities, and perpetuities, providing readers with the tools to evaluate investment opportunities and financial instruments effectively.

Financial Analysis and Planning

The chapters on capital budgeting introduce techniques such as net present value (NPV), internal rate of return (IRR), and payback period, equipping readers to evaluate investment projects' profitability and risk.

Cost of Capital and Capital Structure

Understanding the cost of capital is pivotal for optimal financing decisions. The textbook discusses the calculation of weighted average cost of capital (WACC), the trade-offs between debt and equity, and the implications of leverage on firm value. These insights are crucial for designing an efficient capital structure.
