this book highlights the importance of the choroid plexus which forms the blood cerebrospinal fluid barrier and is the site of the major production of the cerebrospinal fluid csf the authors show that this barrier is crucial for maintaining important compositional differences between the blood plasma

and the csf the choroid plexus epithelial cells also prevent the spread of infectious agents and other blood borne entities to the brain tissue chapter topics range from the production of csf by electrolyte regulation in the choroid plexus to details on the selectively transporting nature of this barrier further the authors elaborate on the important roles of csf in sustaining brain health by providing hydration solutes and nutrients to the brain tissue readers will also learn how csf circulates signaling molecules within the compartments of the brain and removes waste products from the brain tissue elucidating the regulation of these processes in the choroid plexus is not only important for the readers understanding of normal brain development and function but is also crucial for resolving a variety of cerebral challenges that lead to brain edema as well as developing treatments for diseases the book discusses disease models like hydrocephalus sleep disorders and age related dementia its comprehensive coverage makes this volume a valuable resource for researchers in cell and neurophysiology as well as graduate students of the neurosciences

new revised content throughout the book provides the most current information for effective practice and includes updated references as well as a discussion of pain mechanisms new screening for neurologic conditions chapter focuses on conditions that require immediate referral when the neurologic condition is in the prodromal stage and have not yet been diagnosed by a medical professional new updated screening tools include optimal screening for prediction of referral and outcome yellow flag ospro yf and optimal screening for prediction of referral and outcome review of systems ospro ros new enhanced ebook version is included with every print purchase allowing access to all of the text images and references from the book on a variety of devices new updated appendices include screening tools and checklists available in the ebook

this volume is the first to describe all clinically and experimental relevant aspects of primary and secondary brain stem lesions important to clinicians it contains a detailed description of the computer tomographical and morphological changes of the cerebral cisterns in acutely and chronically increased intracranial pressure the prognostic value of clinical parameters of primary and secondary brain stem lesions is demonstrated the possibilities of assessing the clinical course by computer aided evaluation are presented in addition to that comprehensive view of morphological radiological and clinical findings extensive investigation concerning blink reflex br and auditory evoked brain stem potentials baep supply highly relevant functional

aspects of those lesions the effects of raised intracranial pressure upon br baep as well as upon cerebral blood flow and focal flow in different brain areas were studied in animal experiments and reveal new and fascinating conclusions based on these investigations a mathematical model following modern concepts of system analysis was developed the model includes the intracranial system autoregulation of cerebral flow cardiovascular components and the short time behaviour of arterial blood pressure regulation

human greatness has many connotations since the requirements for membership in this category are vague and poorly defined admittance to the mount olympus is frequently erratic and subjective especially in view of a wide penumbra zone of border cases nevertheless rising above a twilight zone of debatable cases there are individuals whose right for membership is unquestionable in science one of the unequivocal criteria for greatness relates to how far one's scientific achievement affects the opening of new horizons and points to directions for future development and progress unveiling new visions can derive only from creative people who conceive original ideas and concepts and who are daring enough to promote them against the indifference or opposition of the establishment maintaining the integrity and the faith to one's own ideals may require extraordinary strength of character up to courting persecution or even death as happened in the middle ages and more recently in the first half of this century with regard to cecile and oskar vogt whose lives and accomplishments are described in this book thus the greatness of the vogts is based both on their penetrating vision of the future for brain research and on the sterling quality of their character which sustained a test of fire during the nazi years in germany

the book provides an update of several pathological conditions of the cns that require neurosurgical treatment the different chapters written by the most eminent international scientists and clinicians in the field of neuroscience offer a critical assessment of the relevant nosographic entities that are the subject of current scientific debate the first chapter critically analyses the new who classification of brain tumours while the second chapter is specifically devoted to intracranial tumours in the first years of life the technical aspects of neuro oncological surgery are addressed by two chapters dealing with the suprasellar approach to infratentorial tumours and how to decrease the risk of a specific complication of the surgical management of

these tumours in the paediatric population namely post operative speech impairment hypothalamic tumours with their associated epilepsy and intracranial schwannomas complete the technical surgical section on intracranial tumours an interesting chapter presents the latest advances in clinical prediction in neurosurgery spinal problems are discussed in two chapters the first considering evolving concepts on cranivertebral and spinal instability and the second chiari malformations the management of intracranial arachnoid cysts is still a matter of controversy as demonstrated in a specific chapter of the book another chapter deals with subdural haematomas in both adults and children hydrocephalus is treated in two chapters devoted to two post inflammatory or post infectious complications leading to specific and difficult to treat abnormalities in the csf circulation the final chapter of the book illustrates the rationale behind midface advancement in craniosynostosis as with the previous volume in the series the present volume represents an important contribution to the advancement of neurosurgical specialties
