the transition from adolescence to adulthood has undergone significant changes in recent decades unlike a half century ago when young people in industrialized countries moved from adolescence into young adulthood in relatively short order at around age 20 now the decade from the late teens to the late twenties is seen as an extended time of self focused exploration and education in pursuit of optimally fulfilling relationships and careers recognition of this new period is stronger than ever but an important question remains should emerging adulthood be considered a developmental stage or a process in debating emerging adulthood stage or process two pairs of developmental psychologists take sides in a debate that is central to the very concept of emerging adulthood arnett and tanner argue that as young people around the world share demographic similarities such as longer education and later marriage the years between the ages 18 and 25 are best understood as entailing a new life stage however because the experiences of emerging adults worldwide vary according to cultural context educational attainment and social class these two scholars suggest that there may not be one but many different emerging adulthoods an important issue for this burgeoning area of inquiry is to explore and describe this variation in contrast hendry and kloep assert that stage theories have never been able to explain individual transitions across the life course in their view stage theories including the theory of emerging adulthood ought to be abolished altogether and explanations found for the processes and mechanisms that govern human change at any age this engaging book maps out the argument of stage or process in detail with vigorous disagreements

conflicting alternatives and some leavening humor ultimately even finding some common ground debating emerging adulthood is an absolute must read for developmental psychologists as well as anyone interested in this indisputably important time of life

recently the lives of people from age 18 to 29 have changed so dramatically that a new stage of life has developed emerging adulthood that is distinct from both the adolescence that precedes it and the young adulthood that comes in its wake rather than marrying and becoming parents in their early twenties most people in industrialized societies now postpone these transitions until at least their late twenties and instead spend the time in self focused exploration as they try out different possibilities in their careers and relationships in emerging adulthood jeffrey jensen arnett identifies and labels for the first time this period exploration instability possibility self focus and a sustained sense of being in limbo an increasing number of emerging adults emphasize having meaningful and satisfying work to a degree not seen in prior generations marrying later and exploring more casual sexual relationships have created different hopes and fears concerning long term commitments and the differences between love and sex emerging adults also face the challenge of defending their non traditional lifestyles to parents and others outside their generation who have made much more traditional choices in contrast to previous portrayals of emerging adults arnett's research shows that they are particularly skilled at maintaining contradictory emotions they are confident while still being wary and optimistic in the face of large degrees of uncertainty as the demographics of american youth the american workplace and adulthood continue to evolve emerging adulthood is indispensable reading for anyone wanting to understand the face of modern america

emerging adulthood the period between the late teens and mid twenties is a unique and important developmental period during which people gain relationship experience before settling on someone to partner with romantic relationships in emerging adulthood presents a synthesis of research and theory on this topic leading scholars from demography sociology family studies and psychology provide original data and theoretical analyses that address the formation nature and significance of romantic relationships in emerging adults until recently it was assumed that romantic relationships in emerging adults were not particularly important or formative the material presented allows this assumption to be thoroughly evaluated this volume is intended to be a resource for anyone interested in understanding romantic relationships in emerging adulthood it is especially appropriate for classroom use in upper level undergraduate and graduate courses in the fields of family sociology human development and family studies clinical and developmental psychology and social work

adulthood throughout the book they incorporate fascinating case studies and historical examples e.g. Darwin, Pope Francis, Martin Luther King Jr, Jane Fonda of individuals unique development during this period of life in order to better illustrate the application of this approach to understanding the whole person in context
