Political words, machinations and policies galore cannot disguise our dependence on foreign petroleum and natural gas to keep the country moving. Perspectives of Oil and Gas: The Road to Interdependence is an up-to-date analysis of the dynamics of petroleum resources. It covers such subjects as oil reserves, depletion, policy, pricing, strategy, technological factors and consumer trends. Likewise, it addresses the constraints faced by oil industry planners from production to third-party sales and refining. In addition to in-depth analysis, this book proposes practical solutions to complex problems. For example, how the different objectives and interests of international oil companies and oil-producing countries can be reconciled to their mutual advantage. Attention is also focused on development through cooperation between producers, importers and multinationals. Perspectives of Oil and Gas ends by addressing the main challenges confronting interdependent economies in the near future. Audience: decision makers, policy planners and academics concerned with the business and technical aspects of the petroleum economy and industry.

This book examines the financial, legal and institutional strategies available to the international oil and gas industry to manage political and investment risk. The financial techniques for mitigating and allocating risk include corporate finance, joint ventures and project finance. The legal techniques include production sharing agreements, profit sharing agreements, service contracts, bilateral investment treaties and multilateral investment treaties. The institutional techniques include domestic courts, national constitutions, international arbitral tribunals, governmental and non-governmental regulatory agencies, alliances and energy diplomacy. This book traces the historical development of these techniques and their application in practice. The effectiveness with which companies manage political and investment risk is important for the financial sustainability of individual firms and the industry as a whole. The real and perceived level of risk affects the level of exploration expenditures and therefore the balance between supply and demand and the price of oil and natural gas. The search for a secure supply of oil and gas affects the political, military and economic relations between countries.
