this book examines the relationship between the legal extension of copyright duration as an enduring means of copyright protection and the growth of the uk book publishing industry as a typical creative industry reliant on copyright the book draws on schumpeter s theory of creative destruction to analyse the implications of copyright law and policy on the book industry and illustrate the dynamic interaction between copyright expansion and the growth of the creative industries the book reviews the historical development of uk copyright expansion and also considers copyright in the digital age it explores the legal and economic concerns about copyright protection in general and the expansion of copyright duration in particular using an innovative empirical method it explores whether the expansion of the duration of copyright promotes or precludes the growth of book publishing industry it goes on to suggest changes to copyright policy which would have an impact on the economics of innovation in the creative industries this book will be of particular interest to scholars and students of intellectual property law

this book is a part of icl new book series icl contribution to landslide disaster risk reduction founded in 2019 peer reviewed papers submitted to the fifth world landslide forum were published in six volumes of this book series this book contains the followings one theme lecture and one keynote lecture monitoring and remote sensing for landslide risk mitigation including one keynote lecture landslide early warning systems forecasting models and time prediction of landslides prof nicola casagli is a vice president and president elect of the international consortium on landslides icl for 2021 2023 he is professor of engineering geology at the department of earth sciences university of florence and president of the national institute of oceanography and applied geophysics ogs trieste italy dr veronica tofani is an associate

professor at the department of earth sciences university of florence and program coordinator of the unesco chair on prevention and sustainable management of geo hydrological hazards university of florence prof kyoji sassa is the founding president and the secretary general of the international consortium on landslides icl he has been the editor in chief of international journal landslides since its foundation in 2004 prof peter bobrowsky is the president of the international consortium on landslides he is a senior scientist of geological survey of canada ottawa canada prof kaoru takara is the executive director of the international consortium on landslides he is a professor and dean of graduate school of advanced integrated studies gsais in human survivability shishu kan kyoto university

the world is going green sustainable technologies such as renewable energy and electric vehicles are increasingly becoming part of our daily life this dissertation fills the ensuing gap by providing an insight into the emerging german greentech industry one of the largest in the world it develops an integrated and interdisciplinary theoretical framework in which to assess the relationships between innovation growth and financing from a firm level perspective it then tests this framework empirically in essence the study finds that 1 innovative activity and corporate growth depend heavily on the availability of capital at the same time it appears that particularly innovative firms are more likely to face financial constraints 2 a lack of funds is very apparent for around a quarter of the firms investigated and seems most severe in the early part of the growth state where firms focus on commercializing existing products 3 government support programs only partially offset these effects

the central research objective of the dissertation is to assess the suitability of social responsible investments sris as well as alternative investments for the strategic asset allocation of german pension insurance funds pensionskassen using a vector error correction model we estimate the data generating process of the underlying input variables a bootstrap simulation allows generating future return paths of the underlying portfolios these return distributions will subsequently be used as input for different asset allocation strategies the empirical results of our research study offer valuable conclusions 1 sri structured portfolios consistently perform better than conventional portfolios 2 including alternative investments has a beneficial effect on the risk return distribution and 3 derivative overlay structures mitigate downside risk exposure without impacting average fund

performance in terms of alternative allocation models 1 high equity portfolios lead to an increase in return volatility without sufficiently compensating investors with higher returns 2 hedging against price increases by engineering a portfolio with inflation suitable assets yields mixed results 3 a portfolio composition that combines derivative overlay strategies for both equities and corporate bonds and uses sri screened assets as underlying generates the best results
