Multiple Choice Questions Answers

Lets dive straight into some challenging questions to test your knowledge and enhance your understanding of lipids

1 Which of the following is NOT a characteristic of fatty acids

- a They are long hydrocarbon chains
- b They are always saturated
- c They can be saturated or unsaturated
- d They often possess a carboxyl group at one end

Answer b They are always saturated Fatty acids can be saturated containing only single bonds between carbons monounsaturated containing one double bond or polyunsaturated containing multiple double bonds The presence of double bonds influences the fatty acids fluidity and overall properties Think of saturated fats like tightly packed soldiers rigid and solid at room temperature while unsaturated fats are more like loosely assembled dancers fluid and liquid
