This book is mainly intended for first year university students who undertake a basic abstract algebra course as well as instructors it contains the basic notions of abstract algebra through solved exercises as well as a true or false section in each chapter each chapter also contains an essential background section which makes the book easier to use

The American Mathematical Monthly recommended this advanced undergraduate level text for teacher education it starts with groups rings fields and polynomials and advances to galois theory radicals and roots of unity and solution by radicals numerous examples illustrations commentaries and exercises enhance the text along with 13 appendices 1971 edition

This is the most current textbook in teaching the basic concepts of abstract algebra the author finds that there are many students who just memorise a theorem without having the ability to apply it to a given problem therefore this is a hands on manual where many typical algebraic problems are provided for students to be able to apply the theorems and to actually practice the methods they have learned each chapter begins with a statement of a major result in group and ring theory followed by problems and solutions contents tools and major results of groups problems in group theory tools and major results of ring theory problems in ring theory index

Redesigned for the 11th edition of contemporary abstract algebra student solutions manual for gallian s contemporary abstract algebra written by the author has comprehensive solutions for all odd numbered exercises and a large number of even numbered exercises this manual also offers many alternative solutions to those appearing in the text these will provide the student with a better understanding of the material this is the only available student solutions manual
