rapidly growing cognitive technologies such as word processors web browsers cell phones and personal data assistants aid learning memory and problem solving and contribute to every part of modern life from interviewing crime witnesses to learning a foreign language to calling one's mother this collection of essays on cognitive technology examines the interaction between the human mind and the tools people create to enhance it studying which technologies assist cognition the most and what features are most effective it also considers the point at which the technological enhancement of human ability begins to restrict that very ability such as the risk of some cognitive technologies impairing cognition or creating disadvantages for individuals or groups this collection of 11 essays discusses the most recent psychological research in cognitive technology showcasing the paradigms and theories that have driven the development of new cognitive technologies it explores the impact of technology on cognitive psychology the classroom and social interaction and group

problem solving topics covered include the distracting characteristics of new technologies such as the effects of cell phone use on driving ability and of distracting advertisements on problem solving the study of mass media through assessing memories for media experiences the media's role in advancing gender and racial prejudices and the misuse of cognitive technology through identity theft and cyberterrorism each essay concludes with a bibliography

these essays will shape discussion in the philosophy of psychology for years to come a collection of eleven essays dealing with methodological and empirical issues in cognitive science and in the philosophy of mind representations convincingly connects philosophical speculation to concrete empirical research one of the outstanding methodological issues dealt with is the status of functionalism considered as an alternative to behavioristic and physicalistic accounts of mental states and properties the other issue is the status of reductionism considered as an account of the relation between the psychological and physical sciences the first chapters present the main lines of argument which have made functionalism the currently favored philosophical approach to ontology of the mental the outlines of a psychology of propositional attitudes which emerges from consideration of current developments in cognitive science are contained in the remaining essays not all of these essays are representations the new introductory essay seeks to present an overview and gives some detailed proposals about the contribution that functionalism makes to the solutions of problems about intentionality the concluding essay also not previously published is a sustained examination of the relation between theories about the structure of concepts and theories about how they are learned finally the essay three cheers for propositional attitudes a critical examination of some of d c dennett's ideas has been completely rewritten for this volume a bradford book

this textbook is for use by psychology neuroscience and cognitive science undergraduates studying cognition

this volume pulls together interdisciplinary research on cognitive representations in the mind and in the world the chapters from cutting edge researchers in psychology philosophy computer science and the arts explore how structured representations determine cognition in memory spatial cognition information visualization event comprehension and gesture it will appeal to graduate level cognitive scientists technologists philosophers linguists and educators

first published in 1994 routledge is an imprint of taylor francis an informa company

in this wide ranging book the author presents his critique of the contemporary portrayal of cognition an analysis of the conceptual foundations of cognitive science and a proposal for a new concept of the mind shanon argues that the representational account is seriously lacking and that far from serving as a basis of cognitive activity representations are the products of such activity he proposes an alternative view of the mind in which the basic capability of the cognitive system is not the manipulation of symbols but rather action in the world his book offers a different outlook on the phenomenon of consciousness and presents a new conception of psychological theory and explanation this revised second edition includes a new postscript

first published in 1990 routledge is an imprint of taylor francis an informa company

can a video game make you cry why do you relate to the characters and how do you engage with the storyworlds they inhabit how is your body engaged in play how are your actions guided by sociocultural norms and experiences questions like these address a core aspect of digital gaming the video game experience itself and are of interest to many game scholars and designers with psychological theories of cognition affect and emotion as reference points this collection of new essays offers various perspectives on how players think and feel about video games and how game design and analysis can build on these processes

this volume is a direct result of a conference held at princeton university to honor george a miller an extraordinary psychologist a distinguished panel of speakers from various disciplines psychology philosophy neuroscience and artificial intelligence were challenged to respond to dr miller s query what has happened to cognition in other words what has the past 30 years contributed to our understanding of the mind do we really know anything that wasn t already clear to william james each participant tried to stand back a little from his or her most recent work but to address the general question from his or her particular standpoint the chapters in the present volume derive from that occasion

this edited book explores contemporary topics in cognitive and social psychology including several essays which focus on the influence of culture on cognition a diverse range of fascinating topics such as déjà vu savant abilities non suicidal self injury theory of mind problem gambling and sleep disorders are discussed social and professional issues in psychology within an asian context are also highlighted

as a whole the essays in this book address theoretical and empirical issues related to children s learning and cognition the first essay titled learning in cognitive niches treats the process of sense making on a theoretical level discussing the complexity of factors that give rise to children s learning it is followed by an essay titled using the dynamics of a person context system to describe children s understanding of air pressure that applies ideas from complexity science and dynamics systems theory to children s learning about science the next four essays summarize and synthesize already published findings in an effort to go beyond individual viewpoints and present a more nuanced picture of children s sense making in particular two of these summaries preschoolers learning science myth or reality and the emergence of scientific reasoning focus on children s ability to make sense of their physical environment the essay cognition and the child witness understanding the impact of cognitive development in forensic contexts seeks to shed light on children s sense making relevant to forensic issues and the essay beyond the black and white of autism how cognitive performance varies with context ventures in the area of autism a disorder that demonstrates atypical processes of combining pieces of information the final two essays provide original data to add to the discussion of what factors affect cognitive functioning in particular the essay cognitive fitness in young adult video game players seeks to re assess the often assumed relation between video gaming and various aspects of thinking memory intelligence and visual spatial abilities and the essay impact of moving away from home on

undergraduate metacognitive development explicitly connects life circumstances to the ability to monitor and control one's thinking together the collection of essays are a further step towards understanding the process of sense making as children and young adults interact with their environment

this collection of essays was written by former students associates admirers critics and friends of donald r griffin the creator of cognitive ethology stimulated by his work this volume presents ideas and experiments in the field of cognitive ethology the exploration of the mental experiences of animals as they behave in their natural environment during the course of their normal lives cognitive ethology discusses the possibility that animals may have abilities to experience communicate reason and plan beyond those usually ascribed to them in a black box or stimulus response interpretation of their behavior contributions from scientists who have been associated with or influenced by griffin offer a lively array of views some disparate from one another and some especially selected to present approaches contrary to his

this volume presents the latest thinking on attention from the philosophers and psychologists who are working at the interface between these two disciplines

the nature of mental images and their relation to language has caused controversy amongst psychologists for years and the so called imagery debate is still unresolved fresh light is now being shed on this topic using recent findings in neuroscience and the development of behavioural studies reviewing state of the art research in the field of imagery visuo spatial memory spatial representation and language with special emphasis on their interactions the volume shows how and to what extent findings from the studies on imagery can positively influence and enrich other psychological areas such as working memory space and time representation language and embodiment chapter 9 written by michel denis to whom this book is dedicated analyses more than three decades of research and outlines the shared scientific journey of friendship and discovery that has developed across various cognitive topics all of which are linked to and inspired by imagery conceptualization this is the only book to present a critical outline of research on these topics in a single volume and as such will be invaluable to advanced undergraduates postgraduates and researchers in such fields as cognitive psychology neuroscience computer science and neuropsychology

cristiano castelfranchi is one of the pioneers in the theory of goals and goal directed behavior his first seminal contributions date back to the 70s and his work has provided invaluable insights on a variety of topics such as the nature and functions of mental representations the dynamics of belief and reasoning the anatomy of emotions and motivations power and dependence relationships trust and delegation communication norms organizations institutions and agent based social simulation across all these areas castelfranchi's approach has been systematically problem oriented and markedly interdisciplinary achieving worldwide prominence in such diverse domains as cognitive psychology social science artificial intelligence and philosophy of mind what gave consistency and order to his bold and broad theorizing of the human mind and society is the view that as he puts it in this volume goals are the true center of cognition this collection of essays to honor castelfranchi's outstanding career reflects both his wide interests and their unifying focus over sixty leading scholars in their

respective fields offer comments elaborations extensions and cogent criticisms of castelfranchi's ideas exploring their implications and often uncovering unexpected connections with other theories this collection is then completed by a survey of decades of research on the theory of goals authored by castelfranchi himself thus the volume provides not only a fitting homage to cristiano castelfranchi but also an invaluable reference to anyone interested in goal directed behavior at both the individual and the social level

this book is about meaning in music poetry and language it is about signs symbols icons diagrams and more it concerns art and how we communicate how we make sense to each other including the concept of nonsense it is about metaphor and irony it embraces a vast human universe of signification and some of its cognitive machines of meaning making a complex and diverse unfolding of the expressive human mind these 24 essays study different aspects of the way we signify present recent research and models of such processes and discuss the often intricate problems of understanding the relations between expression and thought in evolution music may have preceded the language of words and music remains indirectly present in every temporal unfolding of bodily affective playful meaningful activity we are immersed in meaning and have to listen to it since it constitutes the semiotic reality structuring the world as we experience it

for the past forty years the ideas and findings of george mandler and george mandler himself have been highly influential throughout the field of experimental psychology not only has he helped to advance the study of cognition and emotion in many ways but he also offered assistance and encouragement to numerous young researchers who may expand on the knowledge acquired thus far the editors of this festschrift feel that one of the greatest strengths of mandler's work is the blend of european theorizing and american empiricism this volume contains contributions from friends and colleagues who have been influenced in one way or another by this accomplished psychologist

celebrating the 20th anniversary of the learning research and development center rdc at the university of pittsburgh these papers present contemporary research on cognition and instruction the book pays homage to robert glaser foudner of lrdc and includes debates and discussions about issues of fundamental importance to the cognitive science of instruction
