originally published in 1986 this book consists of 100 problems in probability and statistics  
 together with solutions and most importantly extensive notes on the solutions the level of  
 sophistication of the problems is similar to that encountered in many introductory courses in  
 probability and statistics at this level straightforward solutions to the problems are of limited  
 value unless they contain informed discussion of the choice of technique used and possible

alternatives the solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves the notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems
