this volume contains the english translation of felix kaufmann s 1895 1945 main work methodenlehre der sozialwissenschaften 1936 in this book kaufmann develops a general theory of knowledge of the social sciences in his role as a cross border commuter between husserl s phenomenology kelsen s pure theory of law and the logical positivism of the vienna circle this multilayered inquiry connects the value oriented reflections of a general philosophy of science with the specificity of the methods and theories of the social sciences as opposed to abstract natural science and psychology the core focus of the study is the attempt to elucidate how and under what conditions scientific knowledge about social facts empirically justified and theoretically embedded can be obtained the empirical basis of knowledge within the social sciences forms a phenomenological concept of experience according to kaufmann this concept of experience exhibits a complex structure within the meaning interpretation of human action as the core of knowledge in

the social sciences this structure reaches out across the isolated act of verification toward the synthesis of external and internal experiences the book opens with a detailed and useful introduction by ingeborg k helling which introduces the historical and theoretical background of kaufmann s study and specifically illuminates his relation to alfred schütz and john dewey finally it contains interviews with and letters to members of his family colleagues and students

the first complete account of the ideas and writings of a major figure in twentieth century intellectual life walter kaufmann 1921 1980 was a charismatic philosopher critic translator and poet who fled nazi germany at the age of eighteen emigrating alone to the united states he was astonishingly prolific until his untimely death at age fifty nine writing some dozen major books all marked by breathtaking erudition and a provocative essayistic style he single handedly rehabilitated nietzsche s reputation after world war ii and was enormously influential in introducing postwar american readers to existentialism until now no book has examined his intellectual legacy stanley corngold provides the first in depth study of kaufmann s thought covering all his major works he shows how kaufmann speaks to many issues that concern us today such as the good of philosophy the effects of religion the persistence of tragedy and the crisis of the humanities in an age of technology few scholars in modern times can match kaufmann s range of interests from philosophy and literature to intellectual history and comparative religion from psychology and photography to art and architecture corngold provides a heartfelt portrait of a man who to an extraordinary extent transfigured his personal experience in the pages of his books this original study both appreciative and critical is the definitive intellectual life of one of the twentieth century s most engaging yet neglected thinkers it will introduce kaufmann to a new generation of readers and serves as a fitting tribute to a scholar s incomparable libido sciendi or lust for knowledge

scientists use concepts and principles that are partly specific for their subject matter but they also share part of them with colleagues working in different fields compare the biological notion of a natural kind with the general notion of confirmation of a hypothesis by certain evidence or compare the physical principle of the conservation of energy and the general principle of the unity of science scientists agree that all such notions and principles aren t as crystal clear as one might wish an important task of the philosophy of the special sciences such as philosophy of physics of biology and of economics to mention only a few of the many flourishing examples is the clarification of such subject specific concepts and principles similarly an important task of general philosophy of science is the clarification of concepts like confirmation and principles like the unity of science it is evident that clarification of concepts and principles only makes sense if one tries to do justice as much as possible to the actual use of these notions by scientists without however following this use slavishly that is occasionally a philosopher may have good reasons for suggesting to scientists that they should deviate from a standard use frequently this amounts to a plea for differentiation in order to stop debates at cross purposes due to the conflation of different meanings while the special volumes of the series of handbooks of the philosophy of science address topics relative to a specific discipline this general volume deals with focal issues of a general nature after an editorial introduction about the dominant method of clarifying concepts and principles in philosophy of

science called explication the first five chapters deal with the following subjects laws theories and research programs as units of empirical knowledge theo kuipers various past and contemporary perspectives on explanation stathis psillos the evaluation of theories in terms of their virtues ilkka niiniluoto and the role of experiments in the natural sciences notably physics and biology allan franklin and their role in the social sciences notably economics wenceslao gonzalez in the subsequent three chapters there is even more attention to various positions and methods that philosophers of science and scientists may favor ontological epistemological and methodological positions james ladyman reduction integration and the unity of science as aims in the sciences and the humanities william bechtel and andrew hamilton and logical historical and computational approaches to the philosophy of science atocha aliseda and donald gillies the volume concludes with the much debated question of demarcating science from nonscience martin mahner and the rich european american history of the philosophy of science in the 20th century friedrich stadler comprehensive coverage of the philosophy of science written by leading philosophers in this field clear style of writing for an interdisciplinary audience no specific pre knowledge required

in 1868 jacob kaufmann the nineteen year old son of a german farmer stepped off a ship onto the shores of new york his brother isaac soon followed and together they joined an immigrant community of german jews selling sewing items to the coal miners and mill workers of western pennsylvania after opening merchant tailor shops in pittsburgh s north and south sides the kaufmann brothers caught the wave of a new type of merchandising the department store and launched what would become their retail dynasty with a downtown storefront at fifth avenue and smithfield street in just two decades jacob and his brothers had ascended pittsburgh s economic and social ladder rising from hardscrabble salesmen into gilded age multimillionaires generous and powerful philanthropists the kaufmanns left an indelible mark on the city and western pennsylvania from edgar and liliane s famous residence the frank lloyd wright masterpiece called fallingwater to the kaufmann clock a historic landmark that inspired the expression meet me under the clock to countless fond memories for residents and shoppers the kaufmann family made important contributions to art architecture and culture far less known are the personal tragedies and fateful ambitions that forever shaped this family their business and the place they called home kaufmann s recounts the story of one of pittsburgh s most beloved department stores pulling back the curtain to reveal the hardships triumphs and complicated legacy of the prominent family behind its success

this volume combines the theoretical and historical perspective focusing on the specific features of a european philosophy of science on the occasion of the 20th anniversary of the institute vienna circle the viennese roots and influences will be addressed in addition there is no doubt that contemporary philosophy of science originated mainly in europe beginning in the 19th century and has influenced decisively the subsequent development of globalized philosophy of science esp in north america recent research in this field documents some specific characteristics of philosophy of science covering the natural social and also cultural sciences in the european context up to the destruction and forced migration caused by fascism and national socialism this european perspective with the integration of history and philosophy of science and the current situation in the philosophy of science after the transatlantic interaction and transformation and the

return after world war ii raises the question of contemporary european characteristics in the philosophy of science the role and function of the renowned vienna circle of logical empiricism and its impact and influence on contemporary philosophy of science is on the agenda too accordingly the general topic is dealt with in two parallel sessions representing systematic formal as well as genetic historical perspectives on philosophy of science in a european context up to the present

this encyclopedia offers systematic and sustained coverage of the many dimensions of legal thought and gives expression to the breadth and depth of the philosophy of law

this volume goes beyond presently available phenomenological analyses based on the structures and constitution of the lifeworld it shows how the science of history is the mediator between the human and the natural sciences it demonstrates that the distinction between interpretation and explanation does not imply a strict separation of the natural and the human sciences finally it shows that the natural sciences and technology are inseparable but that technology is one sidedly founded in pre scientific encounters with reality in the lifeworld in positivism the natural sciences are sciences because they offer causal explanations testable in experiments and the humanities are human sciences only if they use methods of the natural sciences for epistemologists following dilthey the human sciences presuppose interpretation and the human and natural sciences must be separated there is phenomenology interested in psychology and the social sciences that distinguish the natural and the human sciences but little can be found about the historical human sciences this volume fills the gap by presenting analyses of the material foundations of the understanding of expressions of other persons and of primordial recollections and expectations founding explicit expectations and predictions in the lifeworld next it shows on the basis of history as applying philological methods in interpretations of sources the role of a universal spatio temporal framework for reconstructions and causal explanations of what has really happened

an in depth biography of the philosopher who brought phenomenology to the social sciences

from articles centering on the detailed and doctrinal exposition of the law to those which reside almost wholly within the realm of philosophical ethics this volume affords comprehensive treatment to both sides of the philosophico legal equation systematic and sustained coverage of the many dimensions of legal thought gives ample expression to the true breadth and depth of the philosophy of law with coverage of the modes of knowing and the kinds of normativity used in the law studies in international constitutional criminal administrative persons and property contracts and tort law including their historical origins and worldwide ramifications current legal cultures such as common law and civilian european and aboriginal influential jurisprudents and their biographies all influential schools and methods

this book explores the work of thomas seebohm 1934 2014 a leading phenomenologist and hermeneuticist it features papers that offer a critical and constructive dialogue about seebohm s analyses and their implications for the sciences the net result is an in depth study and a helpful overview of seebohm s general approach and his specific views on various areas of modern science the contributors focus especially upon his final text history as a science and the

system of the sciences they view this as the culmination and summary of his historical and phenomenological investigations into the foundations nature and limits of modern sciences this includes not just history but the geisteswissenschaften more generally along with the social and natural sciences as well the essays in this volume reflect that range this volume presents insightful discussions about the nature and legitimacy of the human sciences as sciences and the unique character of the social sciences it will be of interest not just as a matter of historical scholarship but also and above all as an important contribution to phenomenology and to the philosophy of science and the sciences as such it deserves attention by scholars from any philosophical tradition interested in thinking about the foundations of their disciplines and a philosophy of science that includes but is not limited to the natural sciences

an incisive study of the western world's shift from institutional religion to more personal beliefs in the second half of the 19th century this is intellectual history at its most comprehensive and convincing publishers weekly starred review the late nineteenth century was an age of grand ideas and great expectations fueled by rapid scientific and technological innovation in europe the ancient authority of church and crown was overthrown for the volatile gambles of democracy and the capitalist market if it was an age that claimed to liberate women slaves and serfs it also harnessed children to its factories and subjected entire peoples to its empires amid this tumult another sea change was underway the religious revolution in the religious revolution dominic green charts this profound cultural and political shift taking us on a whirlwind journey through the lives and ideas of ralph waldo emerson and walt whitman of Éliphas lévi and helena blavatsky of wagner and nietzsche of marx darwin and gandhi challenged by the industrialization globalization and political unrest of their times these figures found themselves connecting with the religious impulse in surprising new ways inspiring others to move away from the strictures of religion and toward the thrill and intimacy of spirituality the modern era is often characterized as a time of increasing secularism but in this trenchant new work green demonstrates how the foundations of modern society were laid as much by spirituality as by science or reason the religious revolution is a narrative tour de force that sweeps across several continents and five of the most turbulent and formative decades in history threading together seemingly disparate intellectual trajectories green illuminates how philosophers grifters artists scientists and yogis shared in a global cultural moment borrowing one another's beliefs and making the world we know today
