after ten years preparation the first edition of our atlas of human anatomy was published
 between 1946 and 1951 our experience enabled us to improve each of the subsequent
 editions and the present one has also been thoroughly revised and enlarged to allow the
 inclusion of more instructive illustrations throughout we have adhered to our original
 intention that this work should be a well proportioned atlas of life like illustrations
 primarily for medical students but also useful to the practising physician and surgeon the
 introduction of topographical illustrations in the third volume has been welcomed by
 readers and while not embarking on histology semi microscopic figures have been
 introduced into some chapters for a better understanding of function we did not deviate
 without reason from the currently accepted methods of illustrating the elements of the
 different systems such as bones joints muscles vessels and nerves and we were at pains to
 base our illustrations on original dissections and to include in them only essential details the
 use of colour in the illustrations introduced by the italian anatomist aselli 1627 was with
 didactic intent the legends to the illustrations of this edition use the nomenclature of the
 nomina anatomica paris 1955 pna as revised in new york in 1960
