this book introduces entirely new invariants never considered before in homological algebra and commutative and even non commutative algebra the c completion c_m and higher c

completions \hat{c}_m are defined for an arbitrary left module m over a topological ring a spectral sequences are defined that use these invariants given a left module over a topological ring a under mild conditions the usual hausdorff completion \hat{m} can be recovered from the \hat{c}_m completion \hat{c}_m by taking the quotient module by the closure of 0 the new invariants and tools in this book are expected to be used in the study of p adic cohomology in algebraic geometry and also in the study of p adic banach spaces by replacing the cumbersome complete tensor product of p adic banach spaces with the more sophisticated \hat{c} complete tensor product discussed in this book it is also not unlikely that the further study of these new invariants may well develop into a new branch of abstract mathematics connected with commutative algebra homological algebra and algebraic topology
