powered by advances in biosignal processing and biomedical imaging created an amazing account of new possibilities for diagnosis and therapy but also raised major questions of appropriateness and safety the accelerated development in this field alongside with the promotion of electronic health care solutions is often on the basis of an uncontrolled diffusion and use of medical technology the emergence and use of medical devices is multiplied rapidly and today there exist more than one million different products available on the world market despite the fact that the rising cost of health care partly resulting from the new emerging technological applications forms the most serious and urgent problem for many governments today another important concern is that of patient safety and user protection issues that should never be compromised and expelled from the biomedical engineering research practice agenda

because of the radiation dose delivered multidetector row ct mdct may induce cancers and the risk of death has been estimated at up to one per 1 000 examinations despite this only a small proportion of referring clinicians radiologists and technologists are aware of both the radiation risks and their underlying mechanisms this book is designed to rectify this situation the first part of the book provides a comprehensive approach to all the factors that influence the radiation dose and subsequently the risk induced by using mdct in children and adult patients in the second part guidelines are proposed for optimization of the radiation dose in order to obtain an image quality sufficient for appropriate diagnostic performance while restricting the dose delivered this book written by experts of international standing will appeal to both general and specialized radiologists including pediatric radiologists ct technologists physicists manufacturers and all professionals involved in mdct
