this book introduces entirely new invariants never considered before in homological algebra and commutative and even non commutative algebra the c completion c m and higher c completions cn m are defined for an arbitrary left module m over a topological ring a spectral sequences are defined that use these invariants given a left module over a topological ring a under mild conditions the usual hausdorff completion m can be recovered from the c completion c m by taking the quotient module by the closure of 0 the new invariants and tools in this book are expected to be used in the study of p adic cohomology in algebraic geometry and also in the study of p adic banach spaces by replacing the cumbersome complete tensor product of p adic banach spaces with the more sophisticated c complete tensor product discussed in this book it is also not unlikely that the further study of these new invariants may well develop into a new branch of abstract mathematics connected with commutative algebra homological algebra and algebraic topology

this book contains a systematic presentation of quantum functional analysis a mathematical subject also known as operator space theory created in the 1980s it nowadays is one of the most prominent areas of functional analysis both as a field of active research and as a source of numerous important applications the approach taken in this book differs significantly from the standard approach used in studying operator space theory instead of viewing quantized coefficients as matrices in a fixed basis in this book they are interpreted as finite rank operators in a fixed hilbert space this allows the author to replace matrix computations with algebraic techniques of module theory and tensor products thus achieving a more invariant approach to the subject the book can be used by graduate students and research mathematicians interested in functional analysis and related areas of mathematics and mathematical physics prerequisites include standard courses in abstract algebra and functional analysis this book contains a systematic presentation of quantum functional analysis a mathematical subject also known as operator space theory created in the 1980s it nowadays is one of the most prominent areas of functional analysis both as a field of active research and as a source of numerous important applications the approach taken in this book differs significantly from the standard approach used in studying operator space theory instead of viewing quantized coefficients as matrices in a fixed basis in this book they are interpreted as finite rank operators in a fixed hilbert space this allows the author to replace matrix computations with algebraic techniques of module theory and tensor products thus achieving a more invariant approach to the subject the book can be used by graduate students and research mathematicians interested in functional analysis and related areas of mathematics and mathematical physics
