This study examines the history of environmental issues that accompanied the growth of electrification throughout Great Britain since the 1920s. The focus is on the impact of power stations and the main transmission lines of England and Wales since the nationalization of the industry in 1947. This development has been the target of a great deal of criticism from aesthetic complaints to concerns about pollution and radiation. Drawing on the archives of the industry and those of government departments, the author provides firsthand evidence of how the issues were regarded at the time and of the way in which industry officials dealt with them. This detailed account will be of interest to all who are concerned with the power industry and environmental issues.

The Program of Energy Research Development (PERD) is a federal program that focuses specifically on Canadian energy issues and their impact. PERD funds energy research development interests in 12 departments. Environment Canada is a key player in PERD, leading the delivery of environmental science technology specific to energy issues. This publication first indicates how Environment Canada's energy research development activities jointly benefit both

departmental period mandates it then describes the department's involvement in period over 2001-03 at the project level by profiling period projects in six sectors: oil, gas, transportation, buildings, communities, industry, electricity, and climate change. For each project, information is included on objectives, methodology, goals, outputs, successes, and funding.

In *Evolution's Seed*, McElvaine bridges the gap between evolutionary biology and history to create a new approach he terms biohistory. Book jacket
