this very short introduction traces the history of paleoanthropology from its beginnings in the eighteenth century to the latest fossil finds although concentrating on the fossil evidence for human evolution it also covers the latest genetic evidence about regional variations in the modern human genome that relate to our evolutionary history bernard wood draws on over thirty years of experience to provide an insider s view of the field and some of the personalities in it and demonstrates that our understanding of human evolution is critically dependent on advances in related sciences such as paleoclimatology geochronology systematics genetics and developmental biology about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

vertebrate palaeontology is a lively field with new discoveries reported every week and not only dinosaurs this new edition reflects the international scope of vertebrate palaeontology with a special focus on exciting new finds from china a key aim is to explain the science gone are the days of guesswork young researchers use impressive new numerical and imaging methods to explore the tree of life macroevolution global change and functional morphology the fourth edition is completely revised the cladistic framework is strengthened and new functional and developmental spreads are added study aids include key questions research to be done and recommendations of further reading and web sites the book is designed for palaeontology courses in biology and geology departments it is also aimed at enthusiasts who want to experience the flavour of how the research is done the book is strongly phylogenetic and this makes it a source of current data on vertebrate evolution

how humans evolved remains the most up to date forward looking book in physical anthropology through a unique and balanced blend of evolutionary theory population genetics and behavioural ecology the authors move beyond merely describing anthropological finds to showing students the big picture about how humans lived in the past and why they have evolved into the people they are today the fully revised and updated sixth edition offers the best of current research including important new coverage of ar dipithecus the neanderthal genome early complex tool making and symbolic behaviour and much more

for this second edition seymour has written a new introduction and has added a new retrospective essay ernst cassirer scientific knowledge and the concept of man by seymour w itzkoff is currently one of the few books available in the english language that discusses the philosophy of twentieth century german philosopher ernst cassirer itzkoff s study brings cassirer s perspective directly into the contemporary debate over the evolution of human thought and its relationship to animal life further itzkoff places cassirer directly in the context of recent philosophical thought arguing for the importance of his kantian perspective a significance that is amply vindicated by the current interest in cassirer s ideas
