stuttering and cluttering provides a comprehensive overview of both theoretical and treatment aspects of disorders of fluency stuttering also known as stammering and the lesser known cluttering the book demonstrates how treatment strategies relate to the various theories as to why stuttering and cluttering arise and how they develop uniquely it outlines the major approaches to treatment alongside alternative methods including drug treatment and recent auditory feedback procedures part one looks at different perspectives on causation and development emphasizing that in many cases these apparently different approaches are inextricably intertwined part two covers the assessment

diagnosis treatment and evaluation of stuttering and cluttering in addition to chapters on established approaches there are sections on alternative therapies including drug therapy and auditory feedback together with a chapter on counselling reference is made to a number of established treatment programs but the focus is on the more detailed description of specific landmark approaches these provide a framework from which the reader may not only understand others treatment procedures but also a perspective from which they can develop their own offering a clear accessible and comprehensive account of both the theoretical underpinning of stammering therapy and its practical implications the book will be of interest to speech language therapy students as well as qualified therapists psychologists and to those who stutter and clutter

early in this century most empirically oriented psychologists believed that all motivation was based in the physiology of a set of non nervous system tissue needs the theories of that era reflected this belief and used it in an attempt to explain an increasing number of phenomena it was not until the 1950s that it became irrefutably clear that much of human motivation is based not in these drives but rather in a set of innate psychological needs their physiological basis is less understood and as concepts these needs lend themselves more easily to psycho logical than to physiological theorizing the convergence of evidence from a variety of scholarly efforts suggests that there are three such needs self determination competence and interpersonal relatedness this book is primarily about self determination and competence with particular emphasis on the former and about the processes and structures that relate to these needs the need for interpersonal relat edness while no less important remains to be explored and the findings from those explorations will need to be integrated with the present theory to develop a broad organismic theory of human motivation thus far we have articulated self determination theory which is offered as a working theory a theory in the making to stimulate the research that will allow it to evolve further we have stated self determination theory in the form of minitheories that relate to more circumscribed domains and we have developed paradigms for testing predictions from the various minitheories

psychologists offer an increasing variety of services to the public among these services psychological assessment of personality and behavior continues to be a central activity one main reason is that other mental health professionals often do not possess a high level of competence in this area and when dealing with children and adolescents psychological assessment seems to take on an even greater role therefore it follows that comprehensive graduate level instruction in assessment should be a high priority for educators of psychologists who will work with these youth this textbook is organized into three sections consistent with the authors approach to teaching part i provides students with the psychological knowledge base necessary for modern assessment practice including historical perspectives measurement science child psychopathology ethical legal and cultural issues and the basics of beginning the assessment process part ii gives students a broad review of the specific assessment methods used by psychologists accompanied by specific advice regarding the usage and strengths and weaknesses of each method in part iii we help students perform some of the most sophisticated of assessment practices integrating and communicating assessment results and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth a text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development for example several of the major tests reviewed in the text such as the behavioral assessment system for children and the child behavior checklist have undergone major revisions since the publication of the last edition making the current content outdated further

another major test the conners rating scales is undergoing substantial revisions that should be completed before publication of the next edition finally the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current for example there was a special issue of the journal of clinical child and adolescent psychology published focusing on evidenced based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in part 3 this latter point reflects an important trend in the field that should influence the marketing of the book that is there are several initiatives being started in all of the major areas of applied psychology e g school clinical and counseling to promote evidenced based assessment practices these initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment this has been the orientation of this textbook from its first edition that is clinical assessment of child and adolescent personality and behavior has focused on using research to guide all recommendations for practice the ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology
