in 1984 additive manufacturing represented a new methodology for manipulating matter
consisting of harnessing materials and or energy to create three dimensional physical
objects today additive manufacturing technologies represent a market of around 5 billion
euros per year with an annual growth between 20 and 30 different processes materials and
dimensions from nanometer to decameter within additive manufacturing techniques have
led to 70 000 publications on this topic and to several thousand patents with applications as
wide ranging as domestic uses volume 1 of this series of books presents these different
technologies with illustrative industrial examples in addition to the strengths of 3d methods
this book also covers their weaknesses and the developments envisaged in terms of
