this book describes and illustrates the application of several asymptotic methods that have proved useful in the authors research in electromagnetics and antennas we first define asymptotic approximations and expansions and explain these concepts in detail we then develop certain prerequisites from complex analysis such as power series multivalued functions including the concepts of branch points and branch cuts and the all important gamma function of particular importance is the idea of analytic continuation of functions of a single complex variable our discussions here include some recent direct applications to antennas and computational electromagnetics then specific methods are discussed these include integration by parts and the riemann lebesgue lemma the use of contour integration in conjunction with other methods techniques related to laplace s method and watson s lemma the asymptotic behavior of certain fourier sine and cosine transforms and the poisson summation formula including its

version for finite sums often underutilized in the literature are asymptotic techniques based on the mellin transform our treatment of this subject complements the techniques presented in our recent synthesis lecture on the exact not asymptotic evaluation of integrals

it has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events it is not that the facts of history have changed no one will dispute that the battle of waterloo occurred on june 11 1815 or that the allied invasion of europe began on june 6 1944 what each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation by examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the

goal of the management scientist like the historian is to merge the facts and figures of the discipline with today's organizational cultural and economic realities hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities
