an advancing front grid generation system for structured overset grids is presented which

automatically modifies overset structured surface grids and control lines until user specified grid qualities are achieved the system is demonstrated on two examples the first refines a space shuttle fuselage control line until global truncation error is achieved the second advances from control lines the space shuttle orbiter fuselage global truncation error is achieved the second advances from control lines the space shuttle orbiter fuselage top and fuselage side surface grids until proper overlap is achieved surface grids are generated in minutes for complex geometries the system is implemented as a heuristic feedback control hfc expert system which iteratively modifies the input specifications for overset control line and surface grids it is developed as an extension of modem control theory production rules systems and subsumption architectures
