an advancing front grid generation system for structured overset grids is presented which automatically modifies overset structured surface grids and control lines until user specified grid qualities are achieved the system is demonstrated on two examples the first refines a space shuttle fuselage control line until global truncation error is achieved the second advances from control lines the space shuttle orbiter fuselage global truncation error is achieved the second advances from control lines the space shuttle orbiter fuselage top and fuselage side surface grids until proper overlap is achieved surface grids are generated in minutes for complex geometries the system is implemented as a heuristic feedback control hfc expert system which iteratively modifies the input specifications for overset control line and surface grids it is developed as an extension of modem control theory production rules systems and subsumption architectures

historically the management of public lands from a multiple use perspective has led to a system that emphasizes those habitat components or faunal elements that primarily resulted in some sort of definable economic value while this often benefitted other species that were not even considered in the original prescriptions it also negatively impacted others we no longer can afford to take this simplistic view of ecosystem management we need to use a more holistic approach where ecological landscapes are considered as units and land management practices incorporate all elements into an integrated policy this includes examining the impacts of proposed land uses on amphibian reptile and small mammal populations
