this book looks at the affective cognitive roots of how the human mind inquires into the workings of nature  
and more generally how the mind confronts reality reality is an infinitely complex system in virtue of  
which the mind can comprehend it only in bits and pieces by making up interpretations of the myriads of  
signals received from the world by way of integrating those with information stored from the past this  
constitutes a piecemeal interpretation by which we assemble our phenomenal reality in perceiving the  
complex world and responding to it the mind invokes the logic of affect and the logic of reason the former  
mostly innate and implicit and the latter generated consciously in explicit terms with reference to mind

independent relations between entities in nature it is a strange combination of affect and reason that enables us to make decisions and inferences the latter mostly of the inductive type thereby making possible the development of theories theories are our tool kits for explaining and predicting phenomena guiding us along in our journey in life theories however are defeasible and need to be constantly updated at times even radically in this the self and the soul are of enormous relevance the former is the affect based psychological engine driving all our mental processes while the latter is the capacity of the conscious mind to examine and reconstruct the self by modulating repressed conflicts if the soul remains inoperative all our theories become misdirected and a rot spreads inexorably all around us
